**Roadmap for  
the Competitiveness Enhancement Program of  
South Ural State University  
for 2016-2020  
(1<sup>st</sup> stage – 2016-2018)**

Chelyabinsk, 2016

## **Executive team**

- 1) Vyatkin G.P. – President
- 2) Shestakov A.L. – Rector
- 3) Keller A.V. – Vice-Rector of Strategic Development
- 4) Vaulin S.D. – Vice-Rector of Research and Innovation
- 5) Radionov A.A. – Vice-Rector of Academic Affairs
- 6) Katochkov V.M. – Vice-Rector of International Affairs
- 7) Boykova L.I. – Vice-Rector of General Affairs
- 8) Sokolinsky L.B. – Vice-Rector of IT
- 9) Okolnishnikova I.Y.– director of institute of economics, trade and technology.
- 10) Kundikova N.D. – Physics Faculty Dean
- 11) Avdin V.V. – Chemistry Faculty Dean
- 12) Gorshenina D.A. – Head of Information-Analytical Department
- 13) Deev A.V. – Head of International Cooperation Department
- 14) Demin A.A. – Head of Open and Distance Education Institute
- 15) Dyakonov A.A. – Machine Building Technology Department, professor
- 16) Tselikman O.B. – Professor of Adaptive Physical Culture, Physiology and Biochemistry Department
- 17) Keller Al. Vict.– Mathematics, Mechanics and Computer Science Faculty Dean
- 18) Potoroko I.Y. – Head of Expertise and FQuality Control of Food Production Department
- 19) Radchenko G.I. – Computational Mathematics and Computer Science Faculty Dean
- 20) Sapozhnikov S.B. – Distance Learning Engineering and Economics Faculty Dean
- 21) Saphonov E.V. – Aerospace Engineering Faculty Dean
- 22) Shestakova L.I. – International Education Institute Director
- 23) Bulat V.V. – Director, PwC Advisory

The body of this document consists of \_\_\_\_\_ pages.

This document contains \_\_\_\_\_ appendices.

The appendices consist of \_\_\_\_\_ pages.

# I. Key Performance Indicators and Target Model

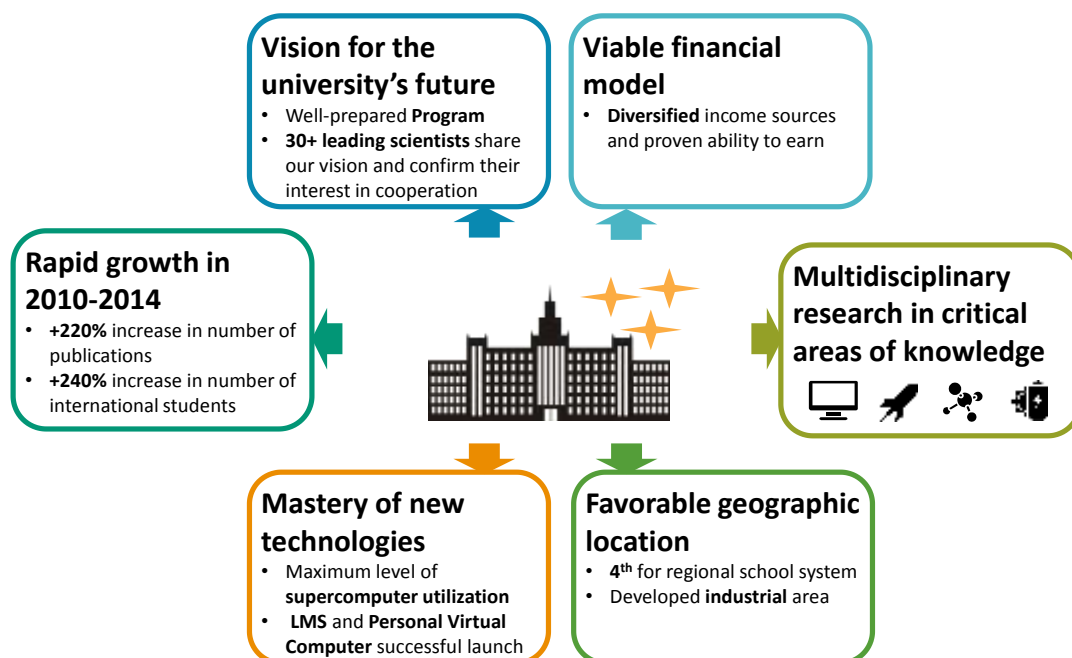

## I.1. University Goals and Key Performance Indicators

At the South Ural State University we endeavor to become a world-class research university with strong entrepreneurial culture and specialization in Supercomputing, Engineering, Natural and Life Sciences. Achievement of this goal will provide University with a rank in top-100 universities according to major global rankings (THE or QS), as well as top-100 positions in the following subject rankings: Computer Science, Mechanical, Aeronautical & Manufacturing Engineering and Materials Science. In line with the goal of becoming a top-100 university, SUSU has set specific strategic goals in Education, Science, Governance, Funding and Infrastructure.

**Table 1. Strategic goals by activity**

| Activity                                 | Strategic goals   |
|--|---|
| Education                                | <ul style="list-style-type: none"> <li>- Global leadership in supercomputing and space engineering education</li> <li>- Integration of students and faculty into international community</li> </ul>   |
| Science                                  | <ul style="list-style-type: none"> <li>- Enhancement of the University scientific activity to the world-class level</li> <li>- Achievement of globally recognized scientific breakthroughs in the fields of specialization of the University</li> <li>- World-wide commercial success and recognition of leadership in innovations</li> </ul> |
| Governance, financing and infrastructure | <ul style="list-style-type: none"> <li>- Diversification of the University funding</li> <li>- Best-in-class operational efficiency</li> <li>- Construction of a new campus according to international standards</li> <li>- Introduction of the new, client-oriented model of the University</li> </ul>  |

**Picture 1. SUSU Competitive advantages**

The University will monitor the progress towards the goal with the help of key performance indicators (KPIs) detailed in the table below. In addition to seven obligatory KPIs it contains three additional KPIs aimed to control Master's and PhD's students' share growth, number of joint study programs and programs offered in English language as well as the progress of the University in the Webometrics ranking.

**Table 2. Obligatory and additional KPIs**

| №      | Mandatory KPIs   | UOM    | Target values |      |         |         |         |
|--------|--|--------|---------------|------|---------|---------|---------|
|        |  |        | 2016          | 2017 | 2018    | 2019    | 2020    |
| 1.     | Position in global university rankings   |        |               |      |         |         |         |
| 1.1.   | Rank in THE  | Rank   |               |      | 701+    | 650-700 | 450-500 |
| 1.2.   | Rank in QS   | Rank   |               | 701+ | 650-700 | 450-500 | 250-300 |
| 1.3.   | Rank in QS «Computer Science» subject ranking  | Rank   |               |      |         | 350-400 | 300-350 |
| 1.4.   | Rank in QS «Mechanical, Aeronautical & Manufacturing Engineering» subject ranking  | Rank   |               |      | 250-300 | 250-300 | 200-250 |
| 1.5.   | Rank in QS «Materials Science» subject ranking   | Rank   |               |      |         |         | 150-200 |
| 2.     | Number of articles in the Web of Science and Scopus after eliminating duplication per academician/researcher   | Number | 0,5           | 0,8  | 1,3     | 2,1     | 3,4     |
| 2.1.1. | Number of articles in the Web of Science per academician/researcher (5 years)  | Number | 0,3           | 0,4  | 0,7     | 1,2     | 2,0     |
| 2.1.2. | Number of articles in the Web of Science per academician/researcher (3 years)  | Number | 0,2           | 0,3  | 0,6     | 1,0     | 1,6     |
| 2.2.1. | Number of articles in the Scopus per academician/researcher (5 years)  | Number | 0,5           | 0,7  | 1,2     | 1,9     | 3,1     |
| 2.2.2. | Number of articles in the Scopus per academician/researcher (3 years)  | Number | 0,4           | 0,6  | 0,9     | 1,5     | 2,5     |
| 3.     | Average citation index per researcher/academician measured by the total count of articles included in the Web of Science and Scopus databases with elimination of their duplication                      | Number | 0,7           | 1,0  | 2,3     | 5,2     | 11,6    |
| 3.1.   | Average citation index per researcher/academician measured by the total count of articles included in the Web of Science database  | Number | 0,3           | 0,5  | 1,2     | 2,9     | 6,8     |
| 3.2.   | Average citation index per researcher/academician measured by the total count of articles included in the Scopus database  | Number | 0,6           | 0,9  | 2,1     | 4,7     | 10,6    |
| 4.     | Proportion of foreign professors, academicians and researchers in the total headcount of researchers and academicians, including Russian nationals holding a PhD from foreign universities               | %      | 1             | 2    | 3       | 5       | 10      |
| 5.     | Proportion of foreign students enrolled in the main educational programs of the University (including students from the CIS countries)   | %      | 9             | 10   | 12      | 14      | 18      |
| 6.     | An average USE (Unified State Examinations) score of full-time students enrolled at the University with their tuition to be paid out of the federal budget under bachelor and specialist degree programs | score  | 67            | 69   | 72      | 75      | 78      |
| 7.     | Proportion of revenues from non-budget sources in  | %      | 45            | 45   | 45      | 45      | 45      |

| №                      | Mandatory KPIs   | UOM    | Target values |     |     |     |     |
|------------------------|--|--------|---------------|-----|-----|-----|-----|
|                        |  |        |               |     |     |     |     |
|                        | the structure of the University's revenues   |        |               |     |     |     |     |
| <b>Additional KPIs</b> |  |        |               |     |     |     |     |
| 1.                     | Share of master's degree and postgraduate students in total  | %      | 27%           | 30% | 35% | 38% | 40% |
| 2.                     | Number of educational programs implemented in partnership with leading international universities and research organisations | Number | 5             | 8   | 12  | 16  | 20  |
| 3.                     | Cumulative rise in Webometrics ranking   | Ranks  | 100           | 200 | 300 | 400 | 500 |

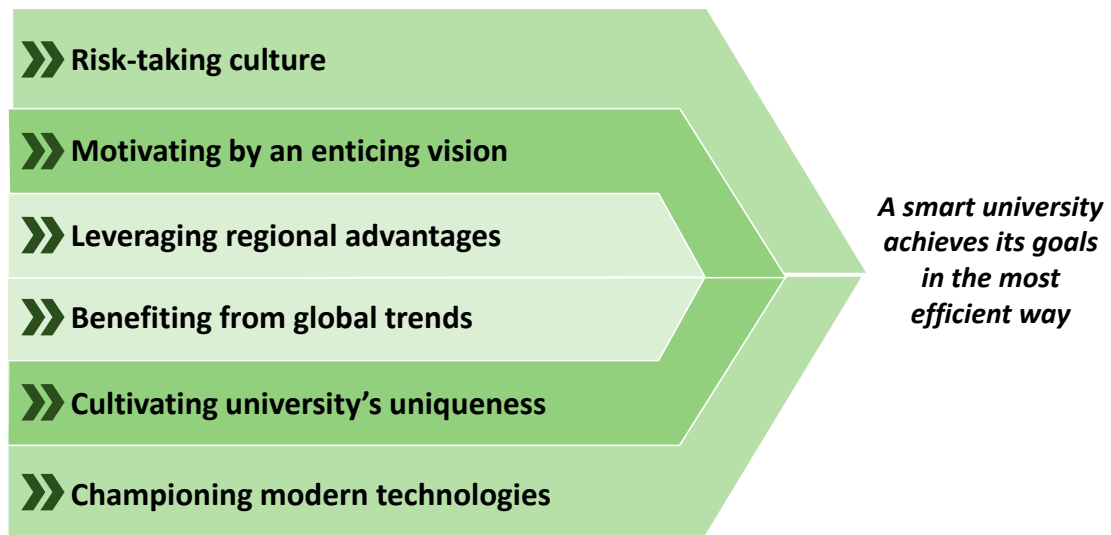

## 1.2 University Target Model

### 1. University Mission

**The mission of SUSU is** to create, communicate and apply scientific knowledge and educate a new generation of leaders, capable of solving global problems of sustainable development.

The University strives to achieve its goals in the most efficient way by making the most of “smart” solutions. The SMART University Concept relies on the inherent strengths of SUSU's corporate culture and represents the integrative foundation of the University's target model.

### Picture 2. Key characteristics of Smart University

### 2. Peer Group

**The reason for selection of a peer group** is to pick up the best practices to enhance efficiency and improve University' standing among the best world universities.

**Table 3. Peer universities and their positions in QS subject rankings**

| University   | QS-WUR | QS-Materials Science | QS-Computer Science | QS-Aeronautical and Manufacturing | Best practices   |
|--|--------|----------------------|---------------------|-----------------------------------|--|
| Korea Advanced Institute of Science and Technology (KAIST) | 51     | 19                   | 39                  | 26                                | - Rapid growth in ranking  |
| Tsinghua University  | 47     | 11                   | 38                  | 16                                | - System for recruiting foreign academic staff<br>- Integration of international students  |
| University of Texas at Austin                              | 79     | 31                   | 22                  | 51-100                            | - Efficient operation of the world's eighth most powerful supercomputer  |
| Darmstadt University of Technology                         | 269    | 51-100               | 101-150             | 44                                | - Interdisciplinary research<br>- Concentrating resources on breakthrough technologies   |
| University of Michigan                                     | 23     | 27                   | 51-100              | 5                                 | - Key role in regional development<br>- Bachelor's program organization model in Michigan Engineering: common admission, 2nd year specialization |

The selected peer group includes leading world universities that are comparable to SUSU by size and have diversified research portfolios and strong positions in target rankings by subject. More details on the best practices at the benchmark universities are cited in the relevant sections.

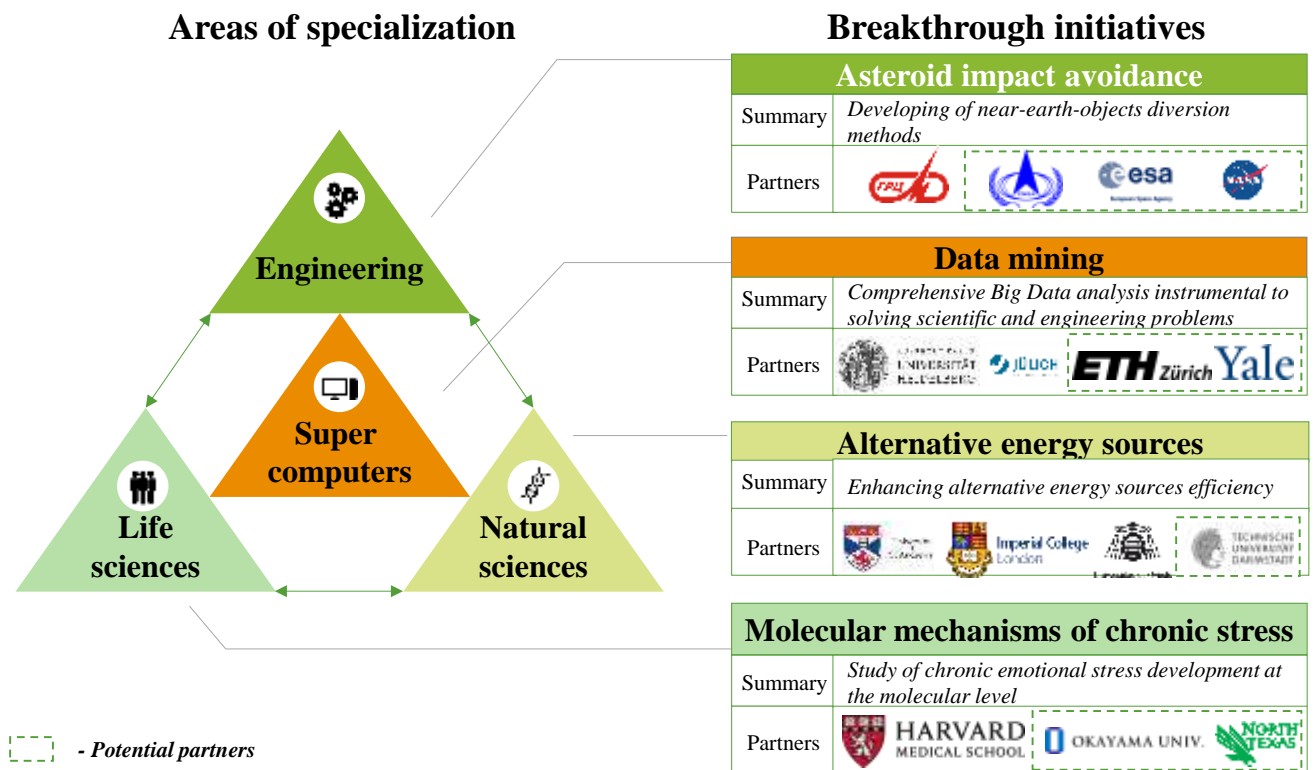

### **3. Marketing Strategy**

#### **3.1. R&D Market Strategy**

**At R&D market the University aims to** hire and retain brightest researchers and increase University's fundamental and applied research funding.

Research activities at SUSU can be grouped around four main disciplines, as depicted in the graph below. Research activities in these disciplines complement each other, nurturing a constant flow of fresh ideas and solutions to diverse scientific challenges. Furthermore, all of these fields of knowledge are inherently cross-disciplinary.

**Picture 3. Areas of specialization and the University's research profile**

The University will focus its efforts on developing cross-disciplinary breakthrough research areas. These areas of research will produce the greatest number of scientific publications and bring the largest part of the University's research budget in 2016-2020. These research areas include:

- Asteroid impact avoidance (Engineering)
- Alternative energy sources (Natural Sciences)
- Data mining (Supercomputing)
- Molecular mechanisms in the development of chronic emotional stress (Human Sciences)

In concentrating its resources on developing cross-disciplinary breakthrough research areas, SUSU follows the example of the Technical University of Darmstadt, a participating university in the German Excellence Initiative. The University has built up a strong academic reputation across the selected focus areas. The Technical University of Darmstadt stands out for the exceptionally high quality of its publications compared to a relatively low volume.

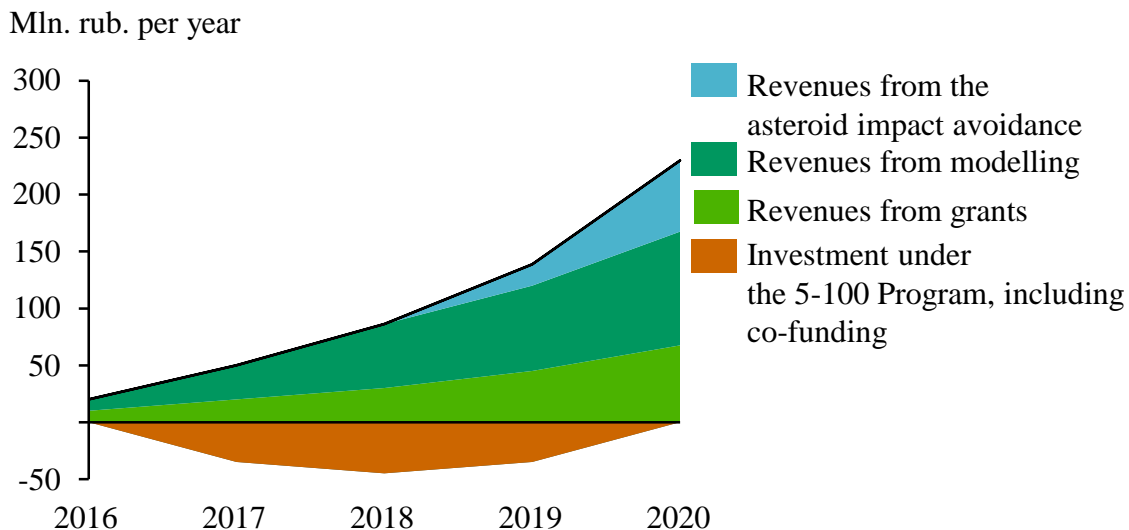

In Engineering, a critical breakthrough initiative is Aeronautical Engineering, in particular – development of asteroid impact avoidance means. Asteroid impact avoidance is a global challenge for humanity which importance for Chelyabinsk and SUSU is highlighted by the recent large asteroid impact<sup>1</sup>. SUSU is working on various space vehicles capable to change asteroid trajectory and prevent impact on the Earth, as well as the means to launch these vehicles into space. These research products rely on the University's unique experience in rocket science. This project is implemented together with Makeyev GRTs, a leading Russian rocket and missile manufacturer. Importance of this problem will also foster collaboration with other leading Russian and international organisations in this area, including the Central Research Institute of Machine Building (TsNIIMash), S.A. Khristianovich Institute of RAS, China National Space Administration (CNSA), the European Space Agency (ESA) and the US National Aeronautics and Space Administration (NASA).

The University prioritised the area of aerodynamics and supercomputer-aided modelling of aerodynamic problems. Currently, Russian rocket scientists make virtually no use of modelling, relying instead on a large number of real-life tests. This leads to overspending on R&D, delays in the development of new rockets and a large number of launch failures, which foster an unfavourable media image for the industry. Developing new technologies and bringing supercomputer modelling services to market will give new impetus to the industry and will turn SUSU into a leader in the field of rocketry and rocket design. To achieve the targeted market position the University engages in proactive marketing of its new modelling technologies, participates in high-profile industry projects and offers courses in modelling for rocket scientists. The target annual revenue in this market could potentially reach about RUB 100 million.

---

<sup>1</sup> In 2013 a large asteroid smashed into the Chelyabinsk region. The asteroid's shock wave broke more than 2000 windows in SUSU building.

**Picture 4. Funding for Aerospace Engineering**

The University boasts substantial engineering competencies in instrument engineering, diesel engines, and the design of micro-electromechanical systems. Research in these areas is in high demand among Russia's leading heavy engineering enterprises. The University's customers include KAMAZ, Avtovaz, Uralvagonzavod, Urals Diesel Engine Plant, Chelyabinsk Tractor Plant, Urals Design Bureau of Transport Machinery, Automotive Plant Ural, Kurganmashzavod, and others. In 2014, the total volume of R&D for industry grew more than threefold compared to 2010, reaching a value of approximately RUB 500 million.

A major breakthrough research area in **Natural Sciences** lies in the field of materials science. The University is working on developing **alternative energy sources**. One of the workstreams in this area is materials for solar cells (photosensitizers) helping to enhance the efficiency of solar batteries and reduce cost of energy generation. Studies in this field are very popular now and more than 6000 scientific papers are published annually. The University's research team has already achieved valuable results with both scientific and practical applications. Among the University's key partners in this area are the University of St Andrews and Imperial College London. Potential customers for photosensitizers include Oxford Photovoltaics, Dyesol, Exeger Sweden AB, 3GSolar Photovoltaics, and Fujikura.

Other promising areas of research in materials science include additive manufacturing technology for composite materials (3D printing), sorbents, metal-oxide monocrystals and other materials that enjoy widespread market demand. One distinctive advantage setting the University apart from other research centers is its pioneering use of supercomputing for materials properties modelling.

**Picture 5. Funding for alternative energy sources**

Besides materials science, the University is also engaged in other Natural Sciences disciplines. The most productive areas in terms of high-quality scientific results are geology and optical information technology. In geological sciences, the University works closely with the Institute of Mineralogy of the Russian Academy of Sciences in Miass, Chelyabinsk Region, while in the field of optics its most significant partner is the Institute of Electrophysics of the Ural Division of the Russian Academy of Sciences.

Research work at the University is funded by domestic and international scientific grants. The University is striving to boost the total volume of international grants through a newly adopted comprehensive system to facilitate grant applications and fundraising from international sources.

In the **Supercomputing**, the major breakthrough area is **data mining**, a technique particularly essential for the comprehensive analysis of Big Data. The research findings in this area has a potential to revolutionize business models of

organisations processing large volumes of information, including mobile phone operators, social media networks, banks to name a few.

The supercomputer is at the very heart of the University's research activities, as it can be used to process highly complex calculations in engineering, natural sciences and IT. Supercomputer is also used to provide University's partners with calculation on a commercial basis. Currently supercomputing revenues constitute 16% of the R&D budget.

**Picture 6. Funding for Supercomputing**

A major breakthrough research area in the **Life Sciences** is **molecular mechanisms of chronic emotional stress development**. In light of the high incidence of chronic stress-related diseases in major cities and the lack of effective ways for relieving stress, these studies are of great importance for modern society. Although this subject is relatively new for the University, SUSU researchers have already published on this topic in top-rated journals and have established meaningful ties within the academic community. Stress studies represent one of the University's cross-disciplinary research platforms, as they call for joint work among psychologists, biologists, and specialists in measurement and tool engineering. The University is collaborating with leading research organisations in this area, including the Harvard Medical School, Leiden University, Edinburg University and New York University.

The achievements of the University's research team in this field provide grounds for optimism, namely the discovery of a drug tolerance mechanism in cases of post-

traumatic stress disorder (PTSD) related to abnormal hepatic microsomal oxidation. This is a global priority; to date no other research center with a focus on PTSD has succeeded in obtaining similar data. This breakthrough opens up the possibility of developing holistic approaches to PTSD treatment, encompassing the following:

- non-medical therapy impacting hepatic microsomal oxidation (hypoxic training, moderate physical activity, etc.);
- development of special medicines that are made efficacious through bypassing the damaged liver and brain-blood barrier;
- elaboration of functional nutrition and diets to heal PTSD and depression.

These R&D outcomes will become the basis for innovative products that can then be patented.

**Picture 7. Funding of Molecular Stress**

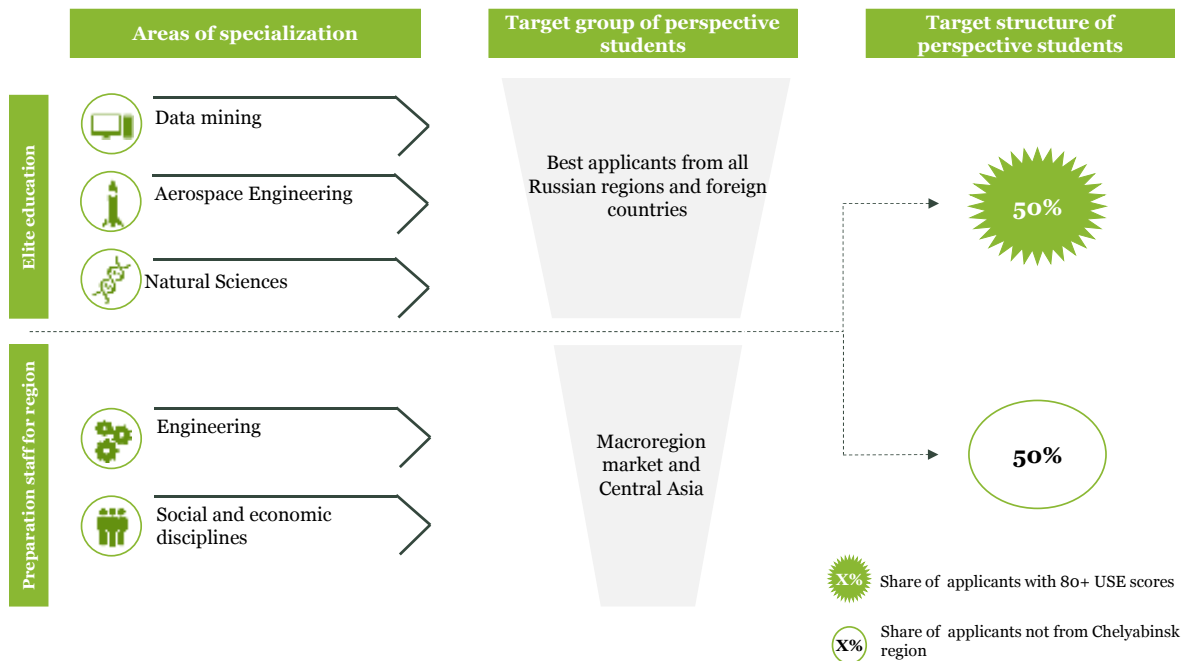

Short-term plans include the establishment of a University-based research center with a dedicated focus on studies in this field. Establishing the center will require an upfront investment of about RUB 30 million, after which recruiting international scientists will require expenditures of about RUB 25 million per year. Starting from 2018-2019, the center is expected to attain sustainable financial self-sufficiency due to grant awards from local and international sources, and the commercialisation of innovations.

### 3.2. Prospective Student Acquisition Strategy

The University aims to recruit best talent both for undergraduate and graduate programs and expand the geography of admissions.

Picture 8. Target model of the market for prospective students

Total amount of SUSU students will be 15000 in 2020, which means a 15% decrease from current numbers. Simultaneously the share of Master's and PhD's students will grow to 40% of the total student population.

The University preferred instruments of recruitment and target audiences differ depending on the region:

- applicants from Chelyabinsk and the Chelyabinsk Region
- applicants from the Southern Urals and Western Siberia macroregion
- applicants from other regions of Russia
- Russian-speaking foreign applicants
- English-speaking foreign applicants

Applicants graduating from schools in the **Chelyabinsk Region** demonstrate a solid academic grounding and knowledge base, as shown by their average Unified State Examination (USE) scores (see table below). SUSU's home macroregion includes several Russian Federation constituent regions, including the Chelyabinsk, Kurgan, Orenburg, Tyumen and Amur regions, the Khanty-Mansiysk and Yamalo-Nenets

autonomous districts, and the Republic of Bashkortostan. SUSU is highly competitive in the local education market in these regions. Applicants from other regions of Russia will be recruited to the University's elite academic programs.

### Picture 9. Applicants for engineering and technical disciplines

|                                 | Number of applicants passed exam |               |
|---------------------------------|----------------------------------|---------------|
|                                 | Chelyabinsk reg.                 | Macro region* |
| Physics                         | 3 280                            | 12 648        |
| Chemistry                       | 1 371                            | 5 287         |
| Informatics                     | 1144                             | 4411          |
| Math                            | 13 969                           | 53 867        |
| Applicants with high USE scores | ~ 1 000                          | ~ 3 000       |
| Target group                    | 20 %                             | 12 %          |

\*Number of applicants to engineering disciplines with high USE scores is estimated on the basis of Ministry of Education statistics

SUSU can capitalise on its proximity to Russia-Kazakhstan border location and expand the geography of its student admissions. The main international markets where prospective students have been recruited are Central Asia, the Persian Gulf, South-East Asia and China. The University admits foreign students for both Russian- and English-language programs. More than 200 students are already enrolled in Masters and Bachelor's degree programs taught in English.

**Table 4. List of current joint and English-language study programs**

| No. | Description of joint program                               | Partner   |
|-----|--|---|
| 1.  | Innovation Studies   | Lappeenranta University of Technology, Finland                |
| 2.  | Electrical and power engineering: renewable energy sources |   |
| 3.  | Fundamental informatics and information technology         |   |
| 4.  | Management   | Clark University, United States                               |
| 5.  | Business valuation and corporate finance                   | Zhejiang Ocean University, China                              |
| 6.  | Marketing  | St Mary's University, United States                           |
| 7.  | Flight operation of aircrafts                              | ChelAvia Training Center                                      |
| 8.  | Physical and chemical continuum mechanics                  | Zababakhin Scientific Research Institute of Technical Physics |

|    |  |
|----|--|
|    | <i>English-language programs</i>   |
|    | <i>Bachelor's degree programs</i>  |
| 1. | Mechanical engineering automation, Electrical and mechanical engineering       |
| 2. | Chemical engineering   |
| 3. | Economics and finances, Economics, Financial management, Banking and financing |
| 4. | Commodity science, Food technology, Food products of animal origin             |
| 5. | Linguistics  |
|    | <i>Master's degree programs</i>  |
| 6. | Database Technology  |
| 7. | Economics  |
| 8. | Philology  |

New English-language Master's degree programs are planned to be launched in the near future:

- **Computer science:** Fundamental Computer Science and Information Technology: Database Technologies; Highload Systems Development; Computer Modelling of Technology and Processing of Composite Materials etc.;
- **Engineering:** Information-Measuring Engineering and Technology in Innovative Industry Projects;
- **Natural Sciences:** Applied Mathematics and Physics; Mathematics; Chemistry, etc.

As SUSU's survey of prospective students shows, the most important recruitment factors are the University's prestige, quality of education, and the overall experience of studying at the University (academic, social life, sports, etc.). SUSU's marketing strategy is focused on leveraging the aspects of the University's value proposition, perceived to be most significant by prospective students.

SUSU's offering includes quality academic programs in engineering disciplines that are in demand by employers in the regional labour market. The overall experience of studying at SUSU includes a vibrant cultural life, sports events at the University's Olympic-grade athletic facilities, and the opportunity for students to get involved in research projects. Chelyabinsk is a tranquil, liveable city with over one million inhabitants, which boasts highly developed, accessible infrastructure. Adjacent to the

SUSU building lies in an old-growth forest that is a natural extension of the University campus.

In line with its marketing strategy, SUSU has organized the Zvezda (Star) National Competition and the Budushee Rossii (Future of Russia) National Engineering Competition organized along with several other academic competitions with more than 200,000 high school students participating. To further its marketing strategy, the University will deploy the following tools:

- 1) Differentiated scholarships for applicants with high USE scores
- 2) Selective recruitment of applicants from schools with high average USE scores through offering professional navigation and University classes
- 3) Partnerships with universities without master's degree programs
- 4) Development and promotion of massive open online courses (MOOC)

Currently, a shortage of dormitory space is hindering the University's marketing efforts. To resolve this issue, a new world-class dormitory will be opened by 2018.

### 3.3. Job Market Strategy

At job market the University aims to expand the potential employers pool for SUSU graduates, attract employers with international brand names to the campus.

**Picture 10. Employment of SUSU graduates by industry**

Source: LinkedIn

SUSU's engineering and IT graduates enjoy strong demand among national leaders in manufacturing, metals, and tool engineering sectors with major production capacities based in Chelyabinsk Region.

**Picture 11. Target employers of SUSU graduates**

| Direction   | Target employers group  |
|---|---|
|  Computer science  | <ul style="list-style-type: none"> <li>✓ Kaspersky Lab</li> <li>✓ Google, Yandex, Mail.ru</li> <li>✓ Applied Technologies</li> <li>✓ Microsoft</li> <li>✓ IBM, GE, DIY</li> <li>✓ Technological startups</li> </ul>   |
|  Space engineering | <ul style="list-style-type: none"> <li>✓ United Aircraft Corporation, Boeing, Airbus</li> <li>✓ Russian Federal Space Agency, NASA, ESA, CNSA</li> <li>✓ Vostochny Cosmodrome</li> <li>✓ Academician V.P. Makeyev State Rocket Centre</li> </ul>            |

|  Engineering       | <ul style="list-style-type: none"> <li>✓ Renault-Nissan, Daimler</li> <li>✓ Schlumberger, Shell</li> <li>✓ Fortum</li> <li>✓ Metran industrial group, Emerson Process Management</li> <li>✓ Chelyabinsk region industrial corporations, startups</li> </ul> |
|  Life sciences     | <ul style="list-style-type: none"> <li>✓ Media companies</li> <li>✓ "Big Four" companies</li> </ul>   |

#### 4. IT Infrastructure

The University aims to strengthen its leadership among Russian universities by the use of cutting edge technologies in educational and scientific purposes.

SUSU will develop information technologies in the following key areas:

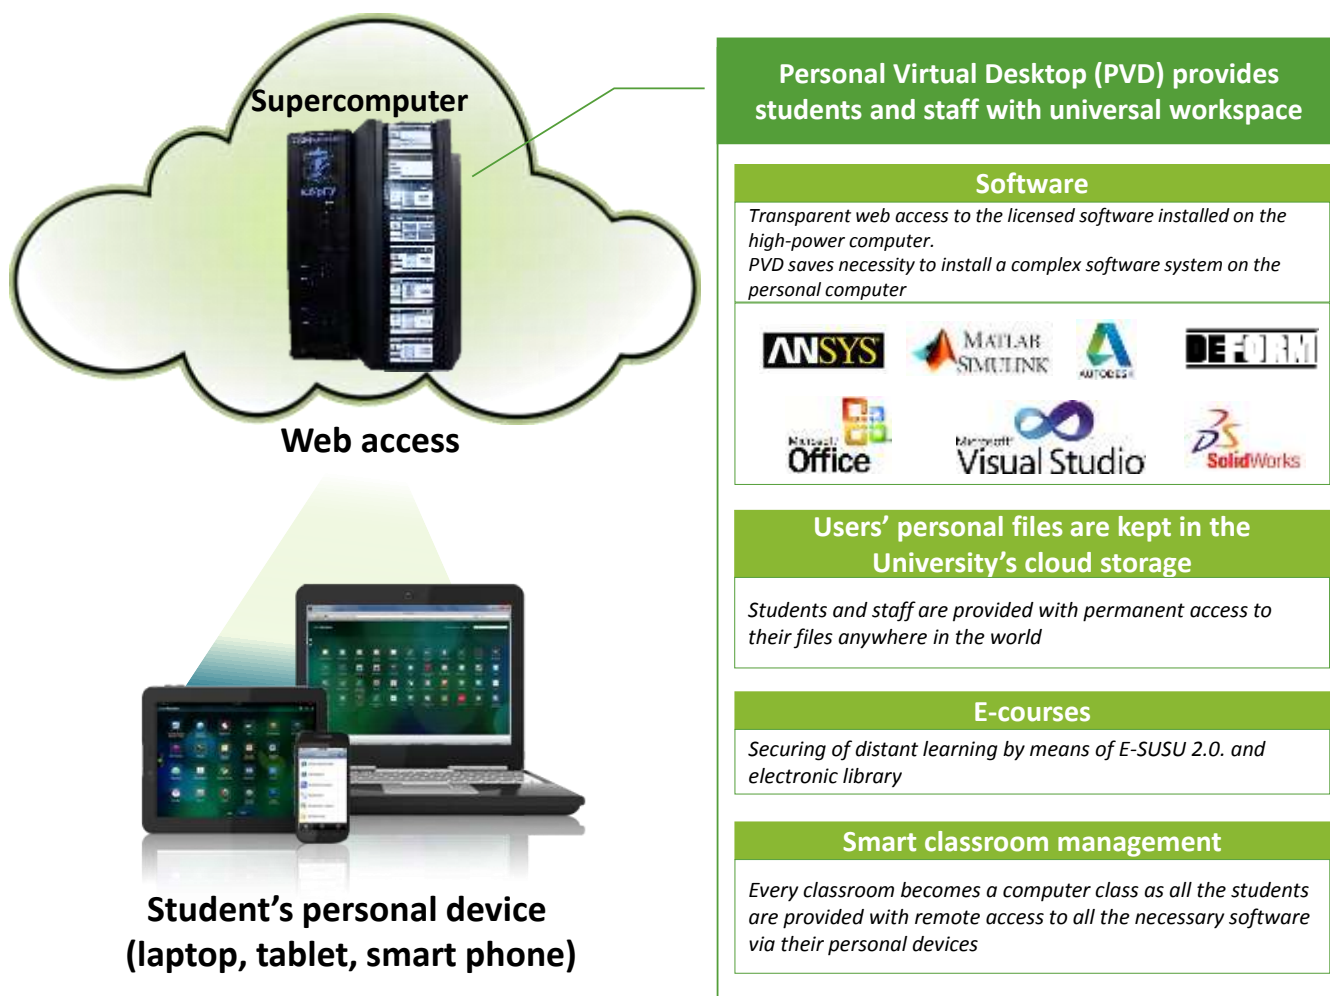

- Establishing fully functional **Intranet**
- Introducing comprehensive **Learning management system**
- Scaling up of universal access-to-knowledge tool - **Personal Virtual Desktop (PVD)**
- Maintaining free **access to supercomputers** for all students

**SUSU Personal Virtual Desktop** system leverages the facilities of the high-performance computing cluster. This system provides all students and staff with access to the data cloud, including access to specialised licensed software, and the University's educational services, as well as remote access to research laboratories.

Currently SUSU's Intranet system Univeris enables direct communication between the administration and staff. In particular, Univeris integrates faculty's profiles and allow to track scientometric data to monitor their progress toward achieving KPIs. Besides that, automated project management system is used for complex research projects. The SUSU Admissions Office uses the Intranet to receive

applications online, to monitor ratings, and to inform applicants of admissions decisions.

**Picture 12. Personal virtual computer**

## 5. Human Resources

The University HR strategy aims to enhance its staff members' professional skills and boost their productivity, as well as recruit young, world-class academics and administrators.

The University focuses on three areas in developing its human resources:

-  International recruiting of faculty and administrators
-  Developing the professional skills of its staff
-  Improving organisational structure

 To recruit world-class academics and administrators, the University is building an **international recruitment system**. The main recruitment tools will include:

- keeping the target audience informed about job opportunities at the University
- stepping up activities within the partnership network of leading global universities
- offering flexible forms of cooperation, both in timing and level of engagement
- putting together a competitive remuneration system that features world-level salaries and social bonuses
- setting challenging research tasks and providing unique scientific equipment

As part of these measures, it will be extremely important to recruit a top-class foreign administrator with a wide network of contacts and to establish an International Scientific Advisory Council. Such measures are vital to success in attracting world-class academics according to the experience of higher educational institutions participating in the 5-100 program. The University seeks to form a critical mass of international researchers that will provide a wide range of contacts with global research centers and ensure its integration with the international academic community.

SUSU intends to organise its international recruitment efforts based on the experience of the selected benchmark universities. For example, Tsinghua University has had notable success in recruiting professionals to a leading emerging market. Research teams within priority research areas may issue grants that are earmarked exclusively for recruiting foreign professionals. As a rule, cooperation starts with short-term, one-year contracts that can be extended to longer periods.

Below is a list of world-class specialists who are partners of SUSU and whom the University intends to offer engagements in joint research projects or positions as leading researchers.

**Table 5. List of leading specialists to be engaged in joint research activities**

| Associate  | Place of employment   | Hirsch index |
|--|---|--------------|
|  Natural Sciences |   |              |
| Wolfgang Haase   | TU Darmstadt  | 35           |
| Oleg D. Lavrentovich   | Kent State University   | 42           |
| Maria Yzuel  | Universidad Autónoma de Barcelona                               | 23           |
| Lyudmila I. Isaenko  | Novosibirsk State University                                    | 23           |
| Viktor V. Atuchin  | Novosibirsk State University                                    | 25           |
| R. Niewa   | University of Stuttgart, Pfaffenwaldring 55, Stuttgart, Germany | 18           |

|  |  |    |
|--|--|----|
| Vladimir G. Tsirelson  | D. Mendeleev University of Chemical Technology of Russia                                       | 21 |
| S. Ordóñez   | Universidad de Oviedo, Department of Chemical and Environmental Engineering, Oviedo, Spain     | 28 |
| J. García  | Universidad de Oviedo, Departamento de Química Orgánica e Inorgánica, Oviedo, Spain            | 19 |
| V.A. Zibarev   | Novosibirsk Institute of Organic Chemistry, Siberian Branch of the Russian Academy of Sciences | 17 |
| Prof Derek Woollins  | St Andrews University  | 37 |
| Hugo Bronstein   | Imperial College London  | 20 |

| Eiji Matsuura  | Okayama University   | 39 |
| Ron de Kloet   | Royal Netherlands Academy of Arts and Sciences   | 90 |
| Farid Chemat   | Université d'Avignon et des Pays de Vaucluse   | 32 |
| Sergey Nikitenko   | Laboratoire de Sonochimie dans les Fluides Complexes (LSFC)                                    | 16 |
| Muthupandian Ashokkumar  | University of Melbourne  | 42 |
| Timothy J. Mason   | Coventry University  | 41 |
|  Engineering  |  |    |
| G. R. Desiraju   | Indian Institute of Science, Solid State and Structural Chemistry Unit, Bangalore, India       | 66 |
| V.M. Fomin   | Khristianovich Institute of Theoretical and Applied Mechanics SB RAS                           | 24 |
| A.V. Fedorov   | Khristianovich Institute of Theoretical and Applied Mechanics SB RAS                           | 16 |
| Manus Henry  | Oxford University  | 12 |
| D.A. Novikov   | Institute of Control Sciences, Russian Academy of Sciences                                     | 43 |
| F. Kloke   | RWTH Aachen University   | 22 |
| E. Brinksmeier   | Universitat Bremen   | 28 |
| Cr. Brecher  | RWTH Aachen University   | 12 |
| K. Patra   | Indian Institute of Technology Patna   | 12 |
| E. Dowell  | Duke University  | 44 |

 Another key area for developing talent pool is in **enhancing the professional skills of staff members**. The University will carry out this task by setting up a full-

fledged HR function responsible for building individual career progress trajectories as well as developing a coaching system. The University will also intensify academic staff learning by using advanced coaching methods (including with the help of other universities' employees), overseas short-term trips of staff to foreign university intended to observe the work of colleagues on similar positions (shadowing), staff secondments to different organisations, departments, structures for 6-12 months. The introduction of contracts based on current KPIs will also contribute to strengthening the professional skills of staff members.

 **The restructuring of the University** is of no less importance. This process will include the following measures: improving the organisational structure; expanding authority delegation practices and consolidating units while removing boundaries between them. These measures will enable the University to increase the productivity of its staff and create a solid base for conducting cross-disciplinary research.

## 6. *Facilities and Equipment*

**The University aims to modernise its facilities and provide researchers and students** with most advanced equipment, essential to reach world-class level in science and education. SUSU has built powerful, up-to-date facilities that include over 10 world-class research and educational centers and laboratories equipped with unique research equipment. SUSU produces 80% of all educational laboratory equipment made in Russia and boasts the country's most complete and advanced educational laboratory complex.

**Table 6. List of University facilities and equipment**

| Laboratory description   | Equipment                                 | Unique characteristics  |
|--|---|---|
| Supercomputer simulation   | Tornado SUSU                              | 473.6 TFlops (trillion floating-point operations per second)<br>244 place in Top-500 supercomputers of the world, 6-th in the Russian Federation          |
|  | SKIF-Avrora SUSU                          | 117 TFlops (trillion floating-point operations per second)  |
| Research and Education Center for Experimental Mechanics and Aerospace Engineering | LMS calculation-and-experimental facility | The only one in the country complete complex used for frequency-response analysis and virtual structural tests and tests of aerospace engineering systems |
| Laboratory for testing of full size diesel engines                                 | A set of HORIBA diesel engine hardware    | The only facility in the country designed to test full-sized diesel engines with a capacity of 90-1,800 kW at stationary and transient cycles             |

|                                   |                                       |   |
|-----------------------------------|---------------------------------------|---|
| Optical interferometry laboratory | Femtosecond laser                     | The only femtosecond laser available in the Urals region  |
|                                   | Interferential testing infrastructure | Unique infrastructure for Russia. Lab's groundwork is not connected with the groundwork of the building and surrounding area, which enables to use of interferential methods for creating photonic structures and light fields with complex distribution of parameters. |

To increase the attractiveness of SUSU as a global research and educational center, the University will undertake the following efforts:

- Building a 3,000-bed dormitory (the site has been allocated and the building plans drawn up)
- Accommodating 20 research laboratories and technology clusters with premises of at least 40,000 sq. m by 2020
- Constructing an Innovation Center
- Developing a barrier-free environment across University
- Improving utilities and enhancing the quality of property management mechanisms based on specific return from their use

The SUSU supercomputer ranks 349th in the TOP500 rating of the world's most powerful supercomputer systems. SUSU plans to make further investments worth more than RUB 1 billion in its supercomputer with the goal of breaking into the rating's top 100 supercomputers by 2020. Plans call for further upgrading the supercomputer's capacity in partnership with high-tech industrial companies. Estimated investment for this project totals RUB 250 million per year. Among SUSU's potential partners are Makeyev GRTs, Uralvagonzavod, KAMAZ, the Institute of Research and Development in Mechanical Engineering, RSC Technologies, and others. The University will raise the necessary funds either through direct investment or through the establishment of a target endowment fund for the supercomputer. If the University continues to develop its supercomputer further solely using its own funds, the results will not be so outstanding. It will only be sufficient to maintain the SUSU supercomputer in TOP500 ranking.

### Picture 13. Investment in supercomputer and rank in Top500

Investment in supercomputing and expected ranking in the Top500 rating

### 7. Economic and Financial Model

**The University's financial and economic model aims to increase revenues** from research activities and diversify sources of financing.

Upon achieving the established goal, SUSU intends to use and enhance its strengths ensuring the University's long-term, sustainable financial development. The University is largely self-sufficient with non-government funding share exceeding 40%. Given its high level of non-budgetary revenues, the University can independently invest in priority development areas. The supercomputer that the University created mainly out of its own funds has been such a priority area for investment since 2000. The target model anticipates:

- 1) higher revenues from research activities
- 2) a gradual increase in the average cost of education due to a focus on the most popular segments of the educational market, a higher share of elite education, and a higher share of master's degree programs
- 3) faster development of new sources of financing: sponsorship, international grants, vocational training
- 4) a competitive remuneration system for faculty and administrative staff
- 5) wider investment resources available at the University through participation in federal and regional development programs, and by bringing in private investors and partners

**Picture 14. Financial-economic model**

## 8. Additional Elements of the Target Model

### 8.1. Regional Development Leadership

The University regional development strategy aims to create a favourable intellectual and business environment in the region and foster investments and jobs creation in the new economy.

Chelyabinsk is Russia's eighth largest urban center with a population of 1.5 million inhabitants. With its manufacturing facilities, the Chelyabinsk Region represents one of the country's biggest industrial clusters, ranking sixth nationwide in per capita industrial output. The University is at the heart of the regional economic and social infrastructure, helping to spur diversified economic growth and contributing to a higher quality of life for the region's population.

University of Michigan provides a perfect example of regional development leadership. It is located in the Rust Belt in the USA and has become an engine of the state economy during the recent industrial crisis. University of Michigan attracts talented people from all over the world and foster development of high growth industries such as IT and medicine. It creates thousands of high quality jobs. In concert

with the local and national government it carries out a number of entrepreneurial, supplementary education and social programs. Thanks to the University of Michigan, a state in the middle of the continent has its own place in the global intellectual agenda. Taking into account UoM experience, South Ural State University aims at:

- **Attracting major companies and investments to the region.** The best example is the University's partnership with Emerson. The company invested in R&D and manufacturing facilities in the region, opening July 2015 a new industrial complex in Chelyabinsk. Traditional Chelyabinsk industries including machine tool building, instrument making, crane building, steelmaking and radiation medicine all benefit from a strong university, increasing their regional production and capacities.

- **New high-tech companies formation.** Engineering companies founded by SUSU graduates work all over the world and cooperate with industrial leaders such as Siemens VAI, SMS-Group, BoschRexroth, Fortum, FUCHS, LINCOLN, Konar.

- **Fostering innovation environment and small business development.** SUSU currently possesses an innovation infrastructure which has enabled to create 58 small innovation businesses over the last five years. These organizations are intended to commercialize University's scientific activities. In order to broaden this sphere SUSU will create an innovation accelerator. The annual revenues of SUSU's innovation belt already stand at RUB 700 million. SUSU's innovation belt specialises, among other things, in the production of training equipment for Russian universities and schools, with the University enjoying an aggregate domestic market share of 80%.

- **Solving the region's environmental issues.** SUSU's R&D outcomes have helped to foster the sustainable development of the region. For example, SUSU researchers recently developed absorbents that immobilise heavy-metal ions and radioactive nuclides. Such absorbents provide protection from industrial contamination at minimal cost. Another example of new products for sustainable development are heat meters for measuring individual heat energy consumption. A pilot project for implementing this technology in Chelyabinsk households has led to reduction of heat energy consumption by 20%.

- **Promoting regional intellectual community.** The University hosts open discussions on the regional social and economic development, University's faculty is

instrumental in developing regional strategy and participate in expert councils held by Chelyabinsk region government.

## ***8.2. Reputation Enhancement Strategy***

**The University's reputation strategy aims to raise awareness of SUSU among potential applicants, researchers and business partners all over the world and to foster a positive image among these groups.**

The University will take the following actions to improve its reputation:

- Rebranding of the University, including developing and implementing new, content-rich brand attributes, and preparing brand books in English-, Chinese- and Russian-language editions
- Boosting awareness of the University in mass media, including developing a system for the integrated promotion of the University in social networks, leading newspapers and magazines, and optimising the University's website
- Improving the University's global academic reputation by stimulating faculty participation in the highest-profile conferences as keynote speakers, developing a CRM system to maintain contacts with the University's alumni and partners, promoting top-rated journals published by the University, etc.

Currently the University is undertaking a project in expanding Supercomputing Frontiers and Innovations magazine to international level. The editorial board of this magazine includes a number of prominent academics, such as Ian Foster (University of Chicago, Hi=47), Jack Dongarra (University of Tennessee, Hi=42) and Thomas Lippert (Julich Supercomputing Center, Hi=40); the average H-index of article contributors is 7.

## ***8.3. Innovation in Education***

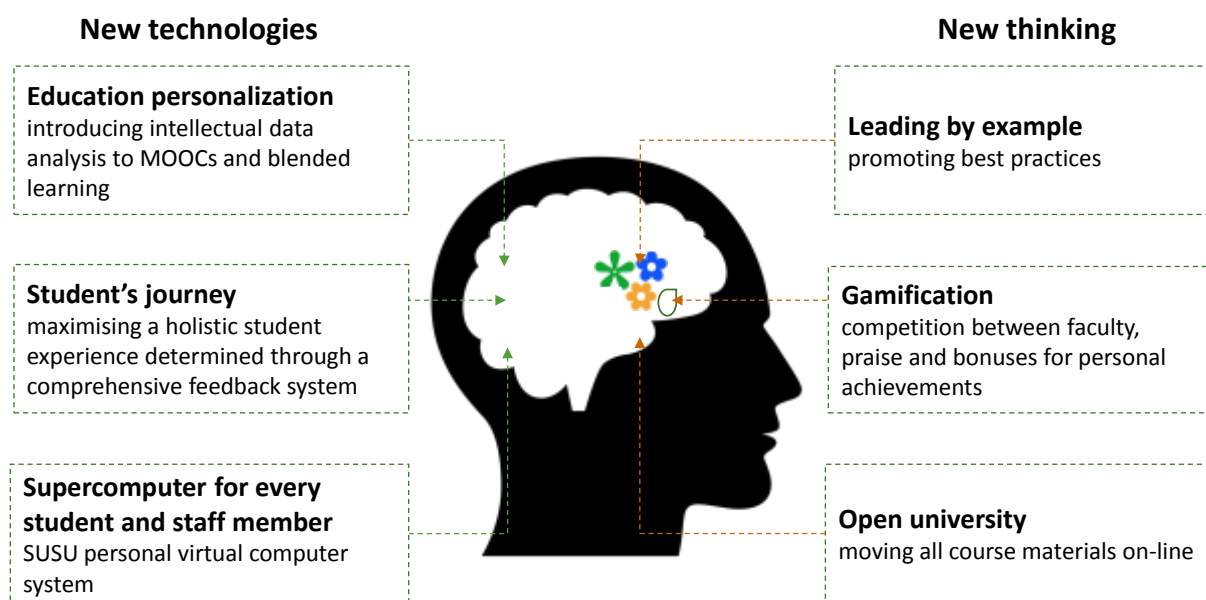

**The University aims at improving the quality and efficiency of education through implementing new educational models and technologies.**

The establishment of the Institute for **Open and Distance Learning** has allowed SUSU to implement innovative technologies in its existing training programs, as well as to offer a number of Russian- and English-language courses in the massive open

online course (MOOC) format aimed at attracting applicants and boosting the University's image.

The University's plans include making its MOOC-format courses available on such leading international forums as edX and Coursera.

### Picture 15. Innovations in education

Among the University's MOOCs are:

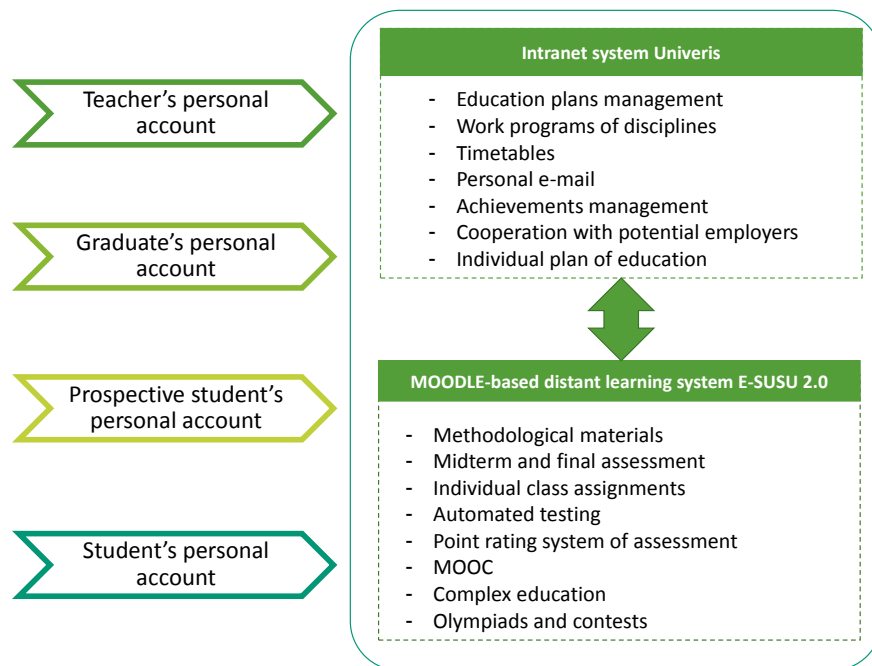

- Advances in Database Systems Development
- Cheminformatics
- Distributed Computing
- Environmental Economics and Natural Resource Management
- Organic chemistry
- Linear Sobolev Type Equations
- Spectral Theory of Differential Operators

SUSU has a MOODLE-based distance learning system, called E-SUSU 2.0. In the short term, the University plans to upgrade it to a complete Learning Management System (LMS). LMS will encompass all educational programs and will help to guide and support students through all stages of their education and subsequent career growth.

At the admissions stage, the LMS will offer career guidance (interactive modelling of future career options), and will allow for participating in academic competitions, enrolling in pre-admission courses and submitting online applications.

For the University, the LMS will provide a rating of applicants and an opportunity to recruit young talent.

### Picture 16. Learning Management System

Throughout the educational process, the LMS can become a virtual personal manager for the student, providing access to such information as curriculum, class schedules, academic performance and personal career path. This "smart" learning system will help to reveal student's weaknesses and gaps in the process of mastering various disciplines. It will also suggest how to overcome them by redirecting the student to disciplines or sections studied earlier.

When used by the teaching staff, the LMS will help to improve the learning process by introducing modern interactive teaching techniques and means for achieving better communications with students, as well as offering tips on self-development. The integration of graduates' personal accounts into the University's LMS will help SUSU keep in touch with them, as well as to improve employer engagement and develop vocational training programs.

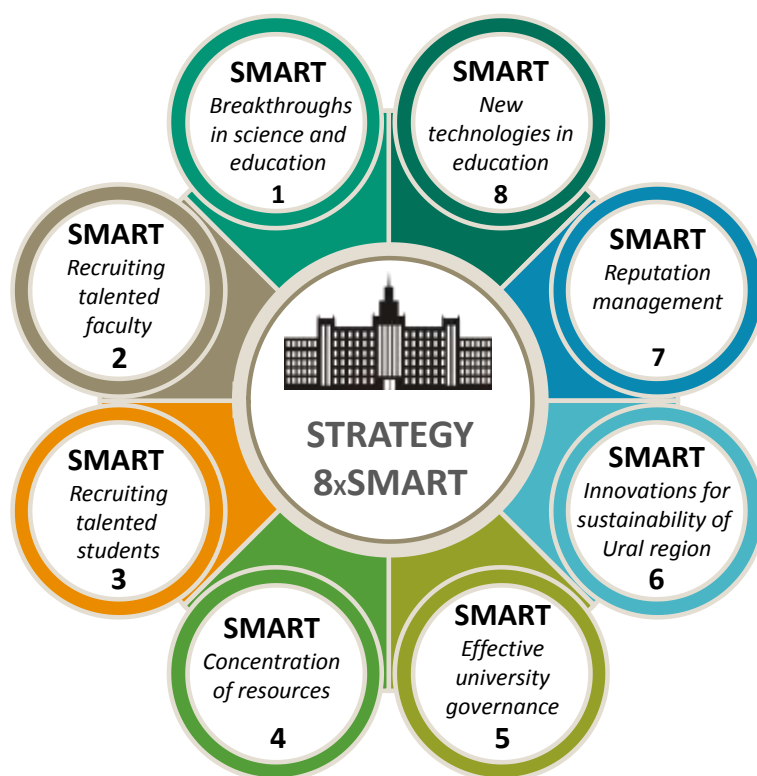

SUSU strives to **improve quality of education** by training teachers and disseminating innovative educational methods. Major attention will be focused on linguistic training of staff and IELTS certification. Major improvement will be achieved through implementation of the MOOCs technology. On this stage, the teachers will be encouraged to take and pass MOOC-format courses through edX or

Coursera, and eventually to prepare their own MOOCs. Pilot projects show that such initiative significantly improves teaching quality: teachers first get to know the new technology and best practices in teaching and then get the chance to examine themselves and to work under the innovative schemes.

### I.3. Strategic Initiatives

To implement the target model, the University has adopted the 8xSMART Strategy, which integrates all Roadmap's strategic initiatives and focuses on implementing the most efficient means of achieving university's objectives.

**Picture 17. The 8xSMART Strategy**

For the first half of 2016, the University has prioritised the launch of SI5 and SI4 activities, i.e. rolling out the Program management system, transforming the University governance system, and concentrating resources on breakthrough areas while withdrawing from less effective areas. Also high on the agenda is SI7, aimed at building up the University's reputation, since the outcomes of this initiative will impact all activities incorporated in the Roadmap.

**Picture 18. Strategic initiatives launch schedule**

*Notes to the Picture: The initiating stage comprises of the project manager appointment and project charter development for each major activity within the initiative. The planning and organizing stage encompasses the development of the project plan, the project's presentation at the Program Steering Committee and project team mobilizing for each major activity of the initiative.*

In the second half of 2016 - first half of 2017, SUSU will launch the main strategic initiatives, SI1, SI2, and SI3, aimed at recruiting talent to the University (students, young faculty members, and leading faculty members), carrying out breakthrough research, and introducing competitive educational products. This stage will be followed by the launch of additional strategic initiatives SI6 and SI8, focused on innovation-driven activities in the region and new educational technologies implementation. Certain activities of each initiative may be launched before the date shown in the Picture, provided a qualified project manager and well-thought-through project management plan are presented to the Programme Steering Committee. The launch dates of key activities are specified in the description of each initiative further in this section. A complete list of activities, featuring KPIs for each activity, is presented in Section II, the University Competitiveness Enhancement Programme Roadmap (the “Roadmap”).

## **SI1. Breakthroughs in Science and Education**

**SI1 aim:** to achieve globally recognised breakthroughs in research and education in SUSU's fields of specialisation.

To achieve this goal, SUSU will focus on four knowledge areas, which lay the foundation of the four Strategic Academic Units (StrAUs). Each unit integrates research projects and educational programs.

- **Engineering.** A leading breakthrough initiative is cross-disciplinary aerospace research, aimed at asteroid impact avoidance. To enhance research competencies, the University will promote an Aerospace Engineering Master's degree program to the national educational market.
- **Supercomputing.** A major breakthrough area is represented by a research project focused on data mining, a technique that is particularly essential for the comprehensive analysis of Big Data. In the supercomputing area, the educational component is represented by the development of an English-language Master's degree programme in Data Mining, which will be intensively promoted domestically and internationally.
- **Natural Sciences.** A major breakthrough research area is the development of alternative energy sources including materials for solar cells (photosensitisers), which will help enhance the efficiency of solar batteries and reduce the cost of power generation. As part of SI1 implementation, SUSU will introduce English-language programs in applied mathematics, physics, chemistry and materials science.
- **Life Sciences.** A major breakthrough research area is the study of molecular mechanisms of chronic emotional stress development, which represents a health problem for residents of large modern urban centers.

Specific prospective research and educational projects will be selected by the independent international experts. To address this task, SUSU is establishing an

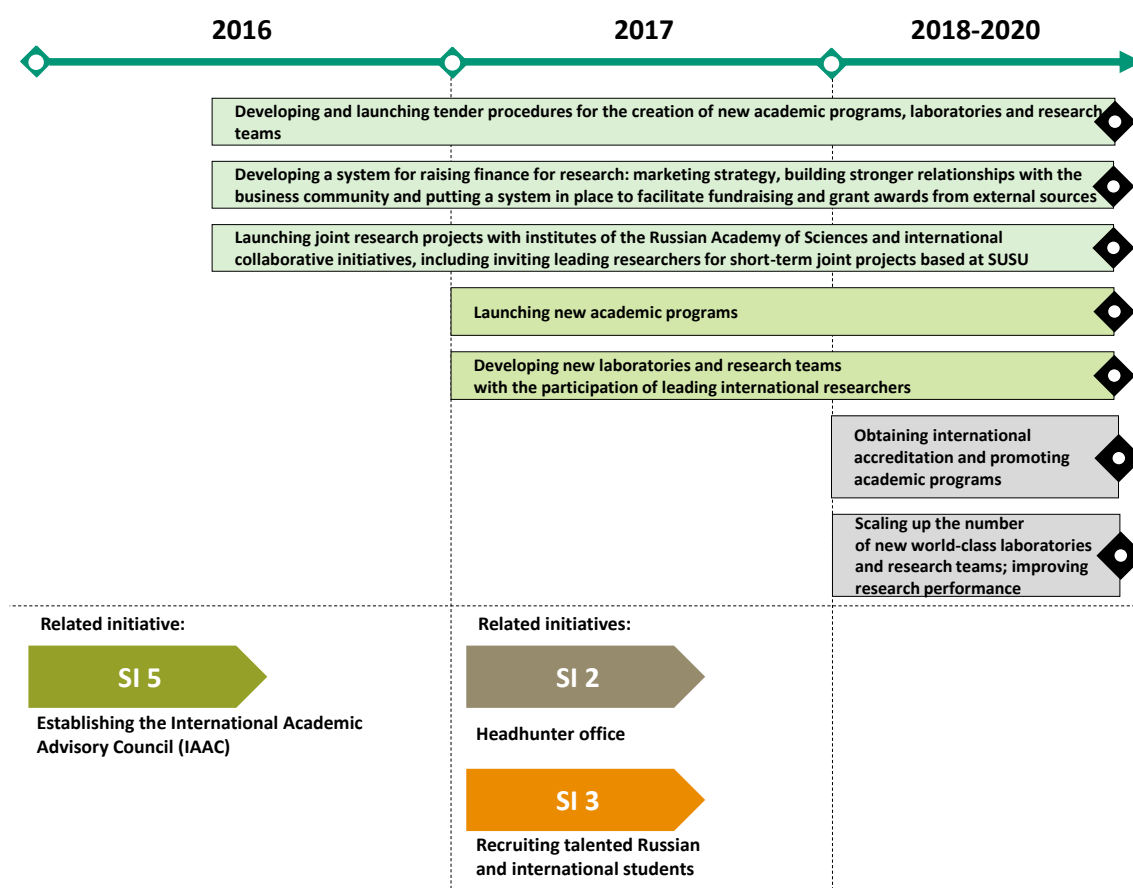

International Academic Advisory Council, comprising of leading global scientists in the domains of natural and computer sciences, engineering and medicine (SI3).

The SUSU Board of Regents, comprising of industrial leaders, will be instrumental in overseeing the University's cooperation with the business community, i.e. by approving a roadmap for promoting SUSU's research capabilities in industrial markets (SI5).

All breakthrough projects leverage the University's supercomputing resources. Many projects will also utilize SUSU's competencies in instrumentation. To achieve higher effectiveness of SI1 implementation, SUSU will engage external partners to cooperate in breakthrough areas in research and education. A high return on investment in breakthrough initiatives will be supported by the University's existing research infrastructure.

**Picture 19. Main actions for implementing SI1**

SI1 integrates a number of other initiatives included in the SUSU Roadmap. For instance, to deliver the priority projects the University will recruit talented researchers and students as part of SI2 and SI3. The concentration of resources on

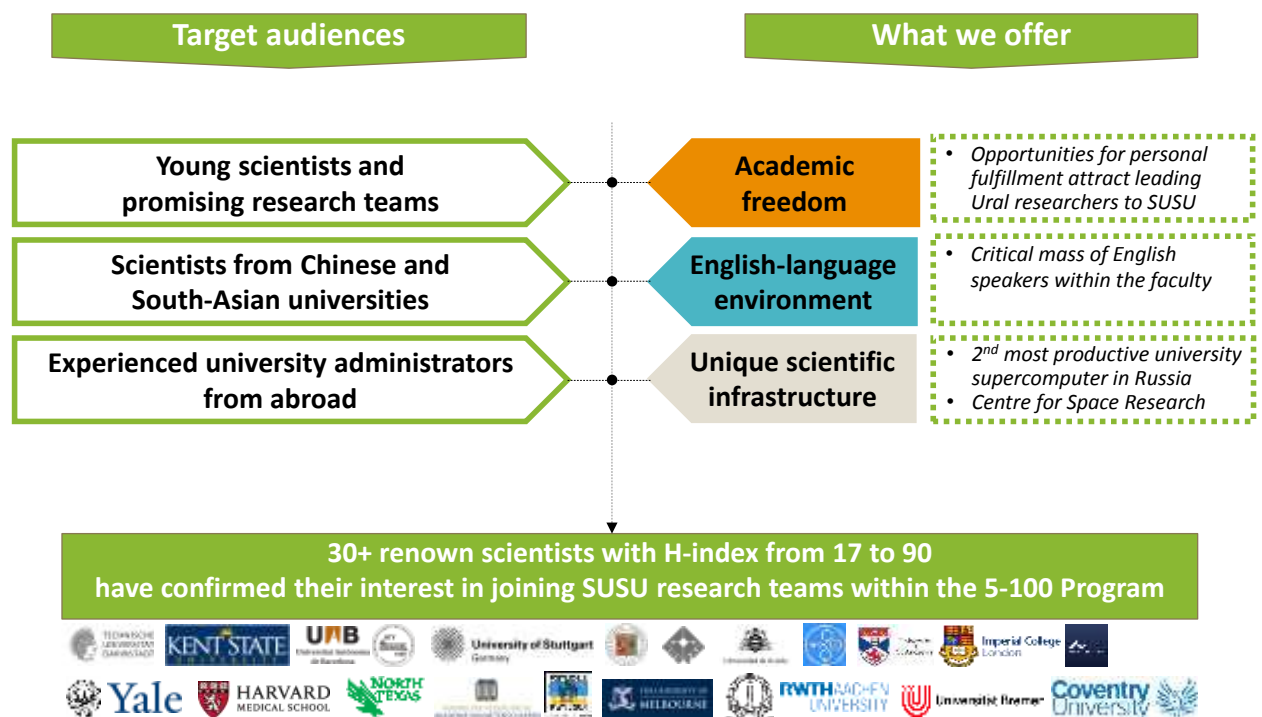

breakthrough areas will be achieved with the help of SI4 activities, in particular through carrying out scientific foresight and an international expert examination of research projects led by the SUSU International Academic Advisory Board.

**The results of SI1 implementation include** boost in the international academic reputation and in citation indices and publishing activity across all breakthrough areas.

## SI2 Recruitment and development of talented staff

**SI2 aim:** To enhance staff members' professional skills and boost their productivity.

**Picture 20. Key personnel recruitment**

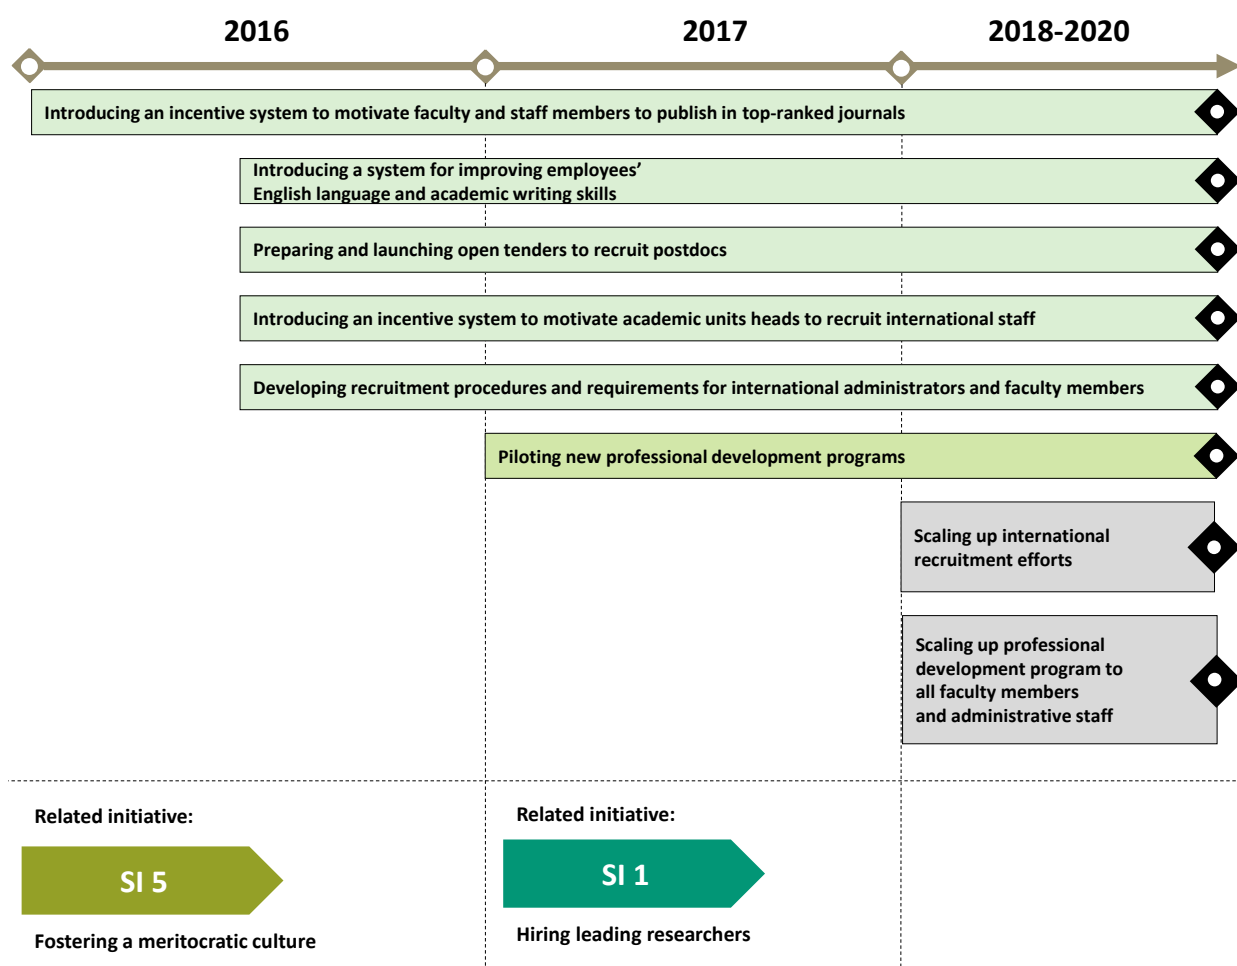

SUSU intends to accomplish this goal by recruiting academics and administrators from leading Russian and international universities, and through advanced training of its own staff members. The recruitment of qualified international staff members requires

- better visibility for the University's leading academics and research activities;
- research grants to ensure competitive compensation packages for international academics;

- mandatory KPIs to measure academic units' performance in recruiting international academics;
- accelerated transition to a bilingual environment;
- experienced top-level administrators with international reputation to enhance SUSU's international network and credibility.

**Picture 21 Main actions for implementing SI2**

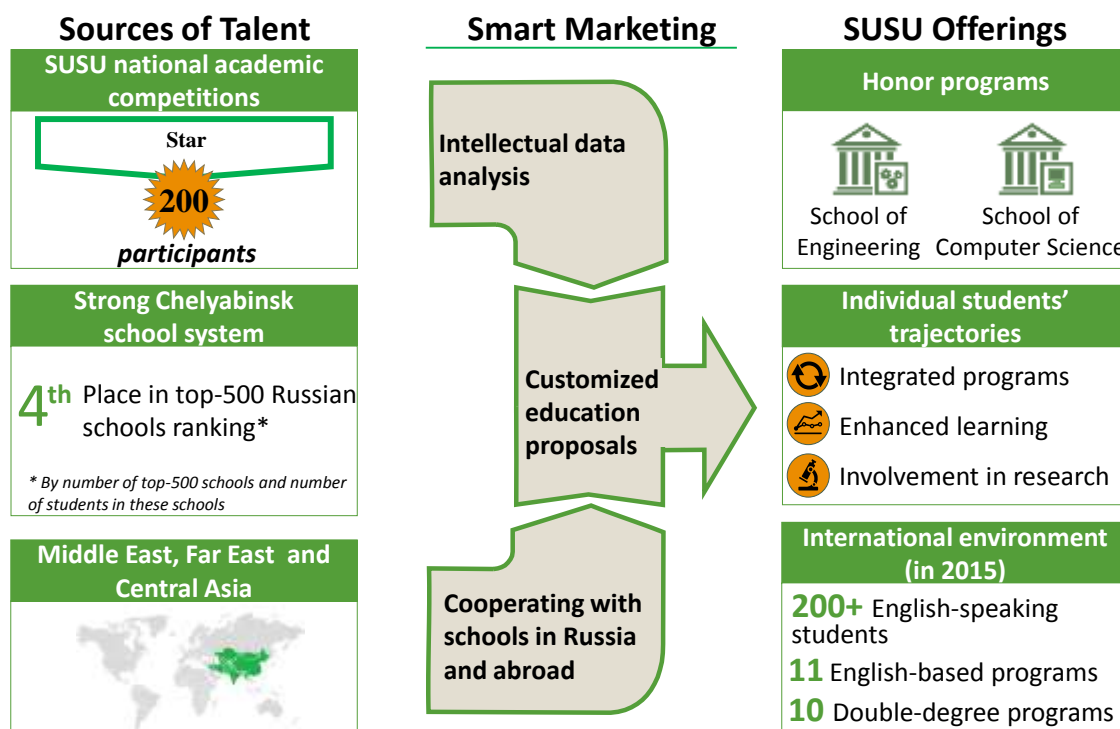

In personnel training and development within SI1, SUSU will focus on improving critically important skills, such as communication skills, publishing activity, English language skills, and the use of advanced educational technologies. SUSU will accomplish these objectives by implementing mechanisms involving micro grants and bonuses, career development for advanced training, non-financial incentives and KPI-based contracts. In late 2015, SUSU adopted a brief, universal list of KPIs for employment contracts with a focus on achieving Program 5-100' major objectives.

The SI2 implementation will enable SUSU to achieve parity with the world's leading universities in terms of the diversity of its staff members and their productivity.

### SI3 Recruiting talented students

**SI3 aim:** To ensure diversity of the SUSU's student body.

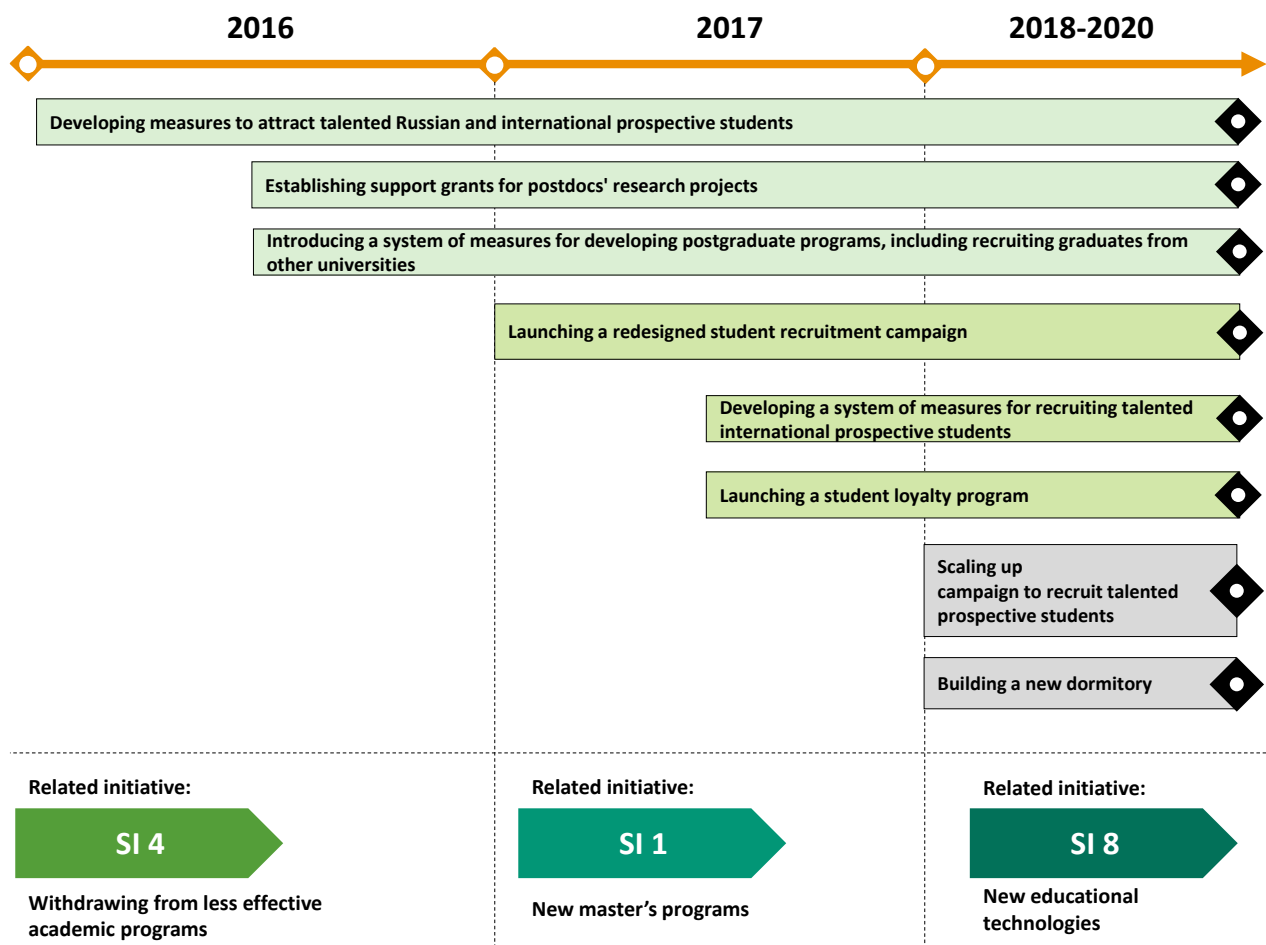

**Picture 22. Recruiting talented prospective students**

SUSU will acquire talented prospective students by implementing a number of measures, including:

- introducing a system of differentiated scholarships for Russian applicants with high USE scores and international prospective students;
- active interaction with high schools in Russia and abroad;
- organising joint (dual degree) programs with leading Russian and international universities;
- development of a bilingual environment.

**Picture 23. Main actions for implementing SI3**

**The SI3 implementation will enable SUSU to educate a new generation of leaders capable of addressing global challenges for sustainable development.**

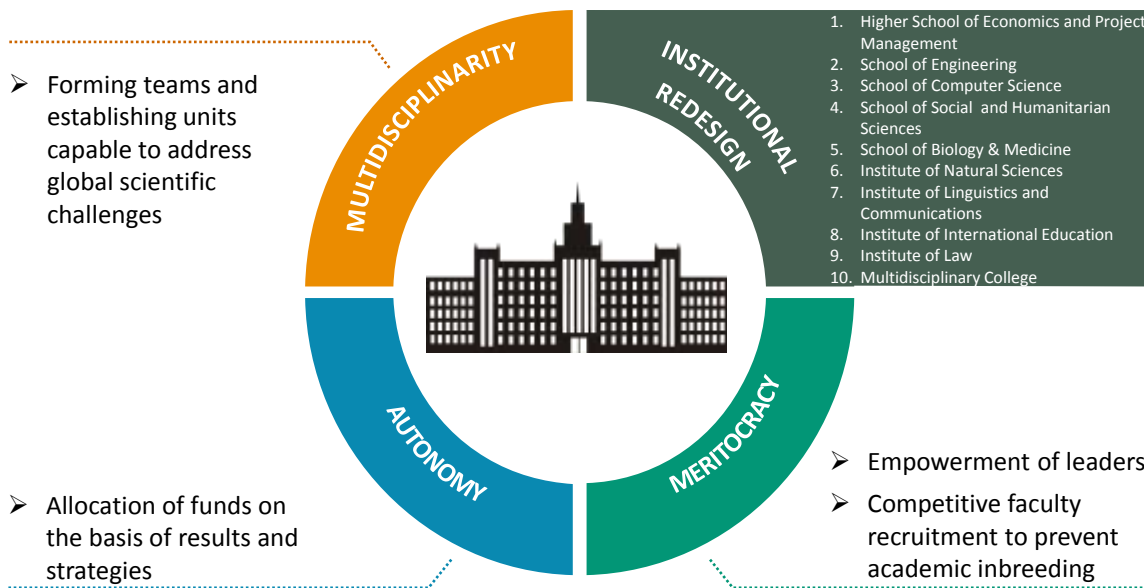

### **SI4 Concentration of resources**

**SI4 aim:** To improve the overall performance of the University.

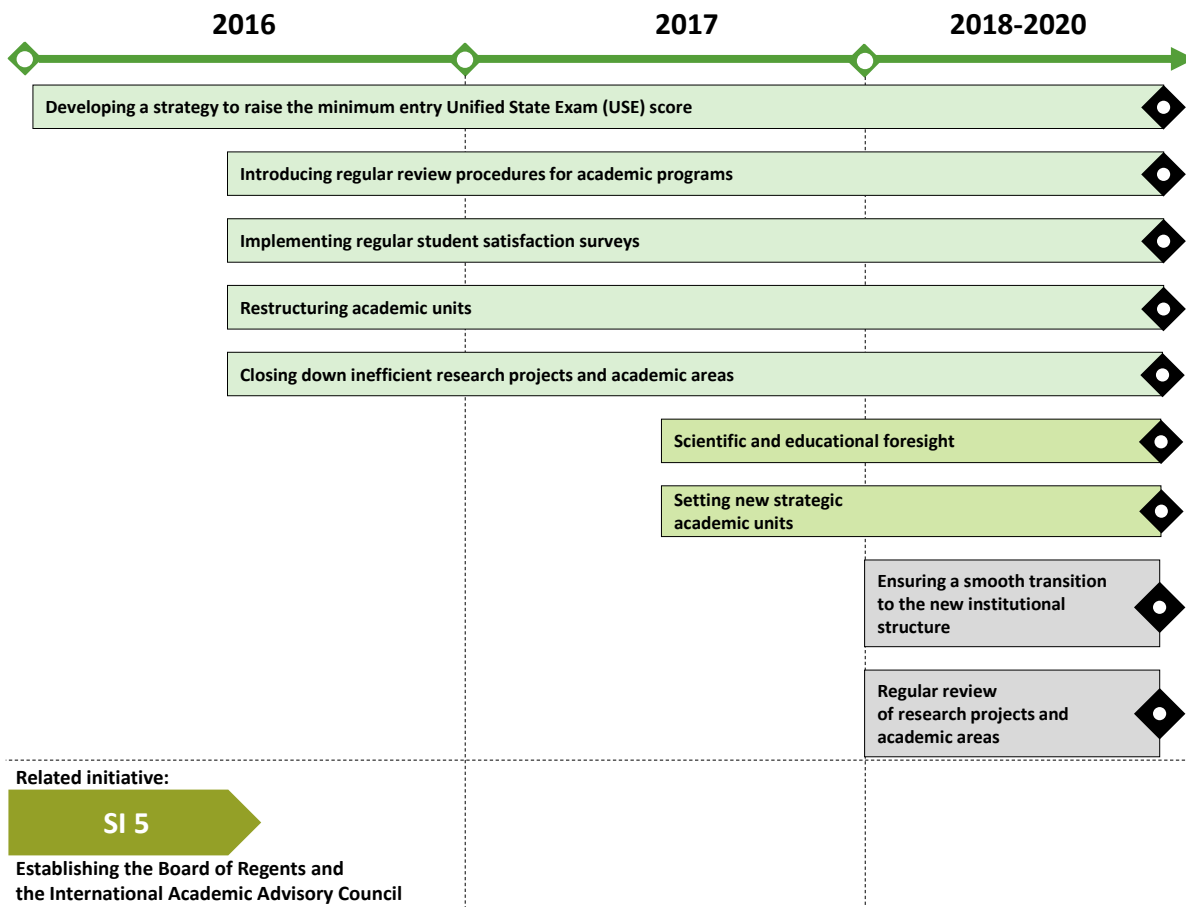

To achieve this goal, SUSU will focus on institutional redesign. The university will form a smaller number of unique academic units to ensure the highest levels of performance and productivity. SUSU's International Academic Advisory Council (IAAC) will play a key role in identifying areas of institutional redesign. It will coordinate research and educational activities at the University in line with global best practices. The IAAC will guide the implementation of scientific foresight to identify areas of the University's fast-track development for 2018-2020. As part of SI4, the University will introduce a regular educational programs review procedures to ensure

that that SUSU’s graduates' expertise and competencies are in demand on the job market.

**Picture 24. Governance framework and target structure**

**Picture 25. Main actions for implementing SI4**

The implementation of SI4 will enable SUSU’s transition to a new structure made up of about 10 schools and with no underperforming units. The restructuring is expected to improve scientometric indicators per faculty member.

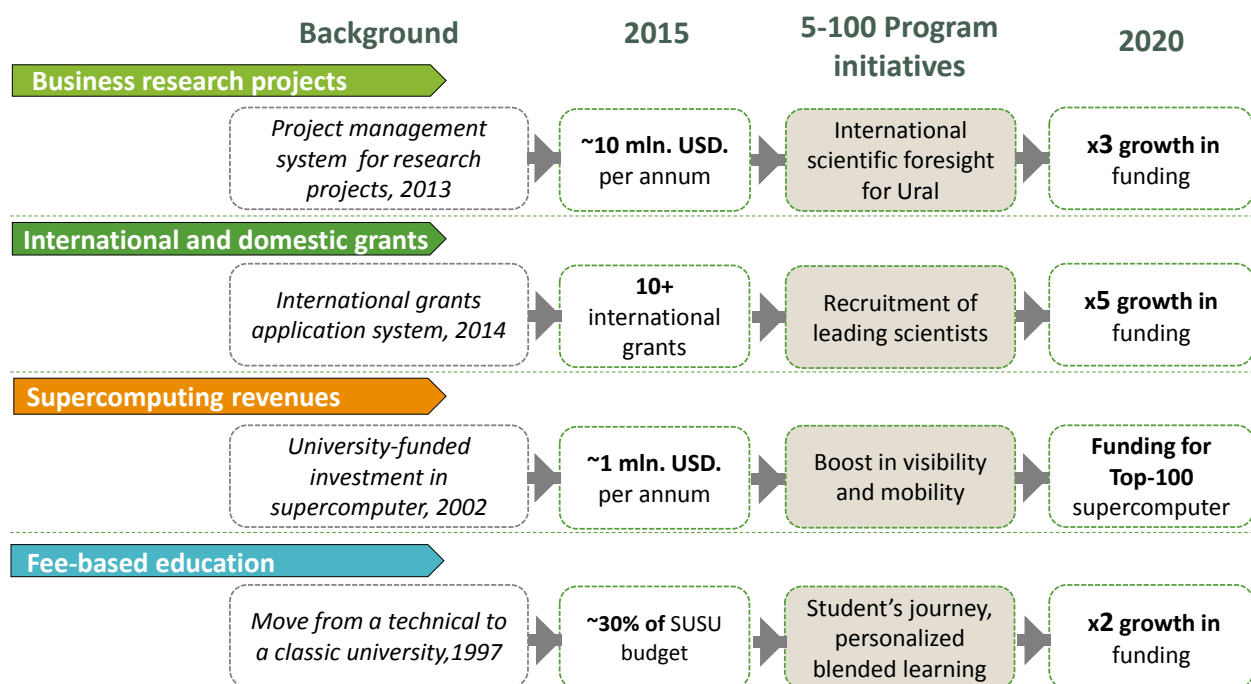

### SI5 Effective university governance

**SI5 aim:** To establish a university governance system in line with world best practices.

To achieve this goal, SUSU will focus on building and developing a truly meritocratic environment. To build such a meritocratic environment, SUSU will need to determine the most appropriate level of autonomy for its structural units, promote the active engagement of talent and introduce efficient incentive system for all staff members.

Another SI5 priority measure is to improve the University's financial and economic model and to master an investment approach for financing University activities. For example, SUSU is contemplating of establishing an endowment fund to support the development of SUSU's supercomputer.

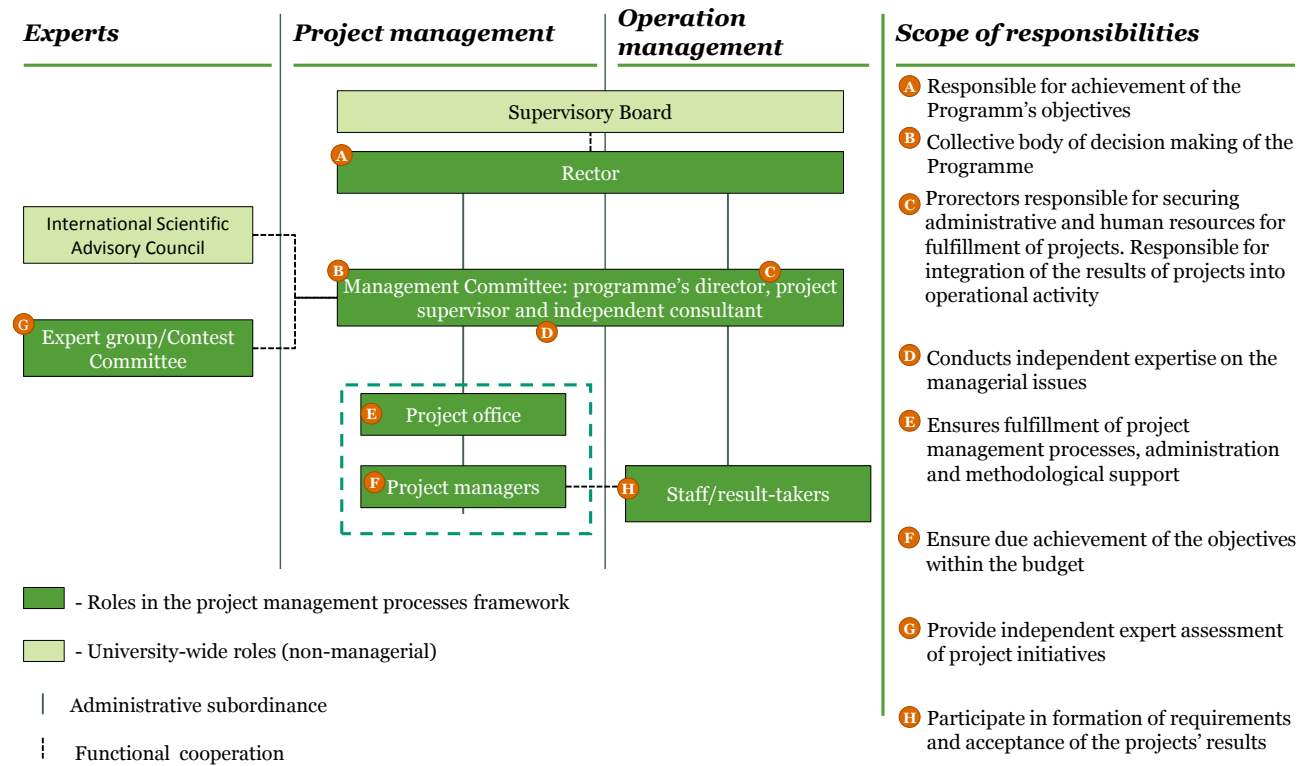

**Picture 26. SUSU investment model**

Within SI5 SUSU will introduce project management office and change management mechanisms for efficient 5-100 Program implementation. The

management process will be based on clearly defined procedures of competitive resource allocation, collegiate decision-making and independent expertise in specific areas of science, education and management.

**Picture 27. Program management chart**

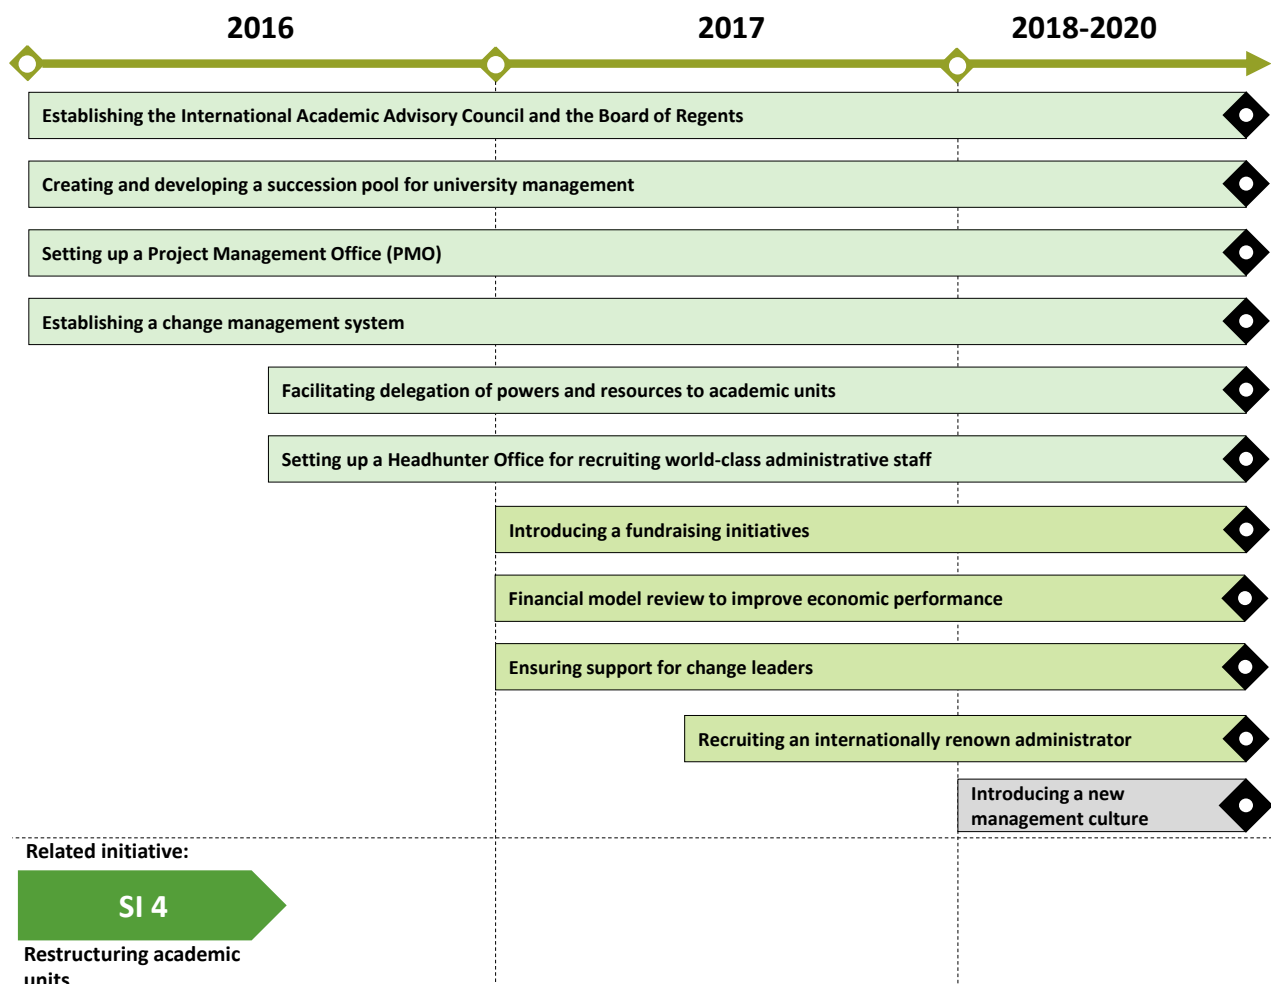

The main task of change management is to ensure support for the Program's implementation. In November-December 2015, SUSU conducted a set of activities to inform staff members about the Program, including:

- the Program's presentation at each SUSU faculty;
- a special issue of the University newspaper;
- an intensive coverage of the program by SUSU TV and radio stations;
- a special page on the University's website;
- installing information boards in key public gathering places on campus.

All University employees had the opportunity to submit their proposals and participate in the survey on the University's website. Based on the survey data and submitted proposals, area-specific working groups have compiled the Roadmap.

**Picture 28. Main actions for implementing SI5**

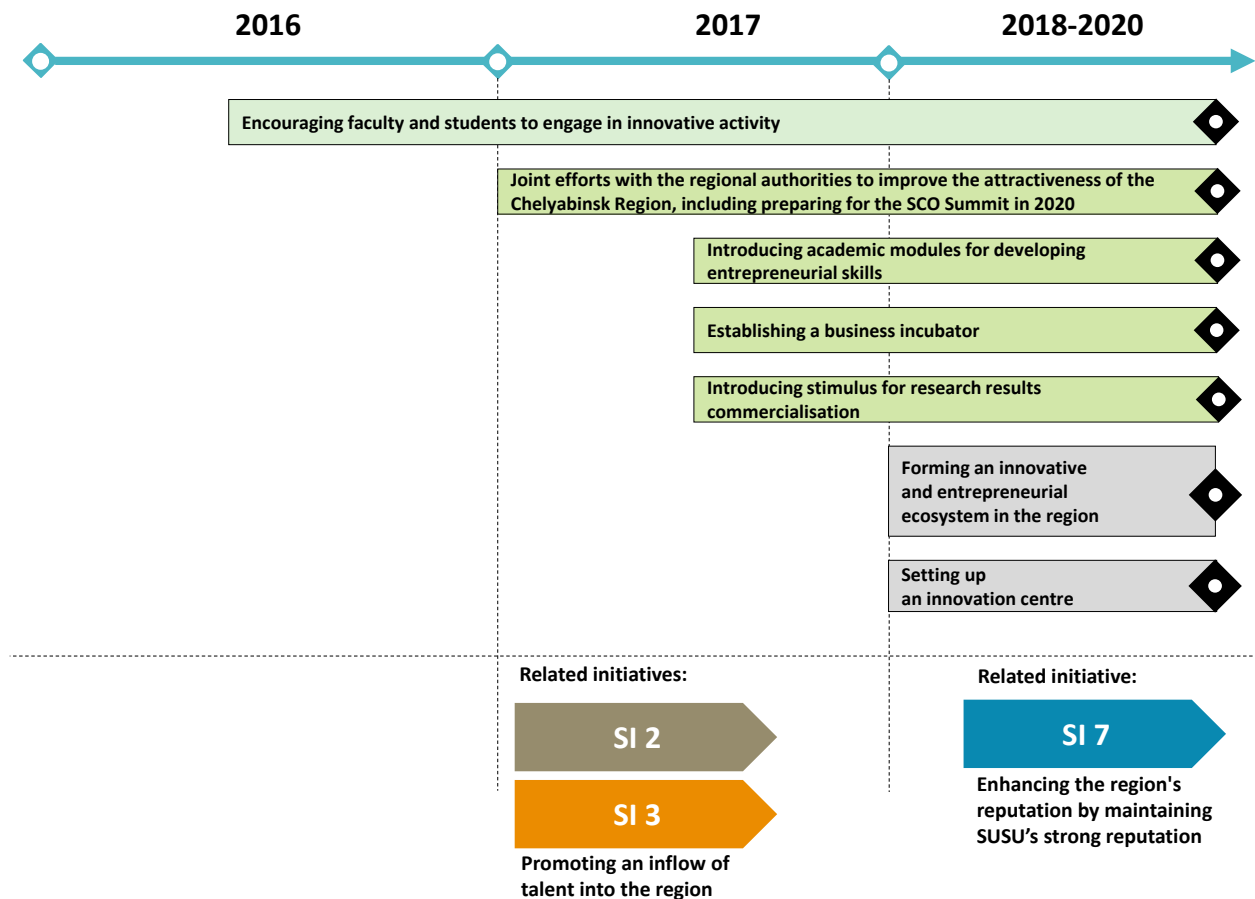

**As a result of SI5 implementation, SUSU will** establish a management system based on the principles of transparency, cooperation and entrepreneurship.

### **SI6 Innovations for sustainability of Ural region**

**SI6 aim:** To achieve sustainable development of the Urals by developing a favourable intellectual, creative and business environment in the region.

**Picture 29. Main actions for implementing SI6**

To achieve the SI6 goal, SUSU intends to create an innovation-conducive environment at the University by implementing a number of measures:

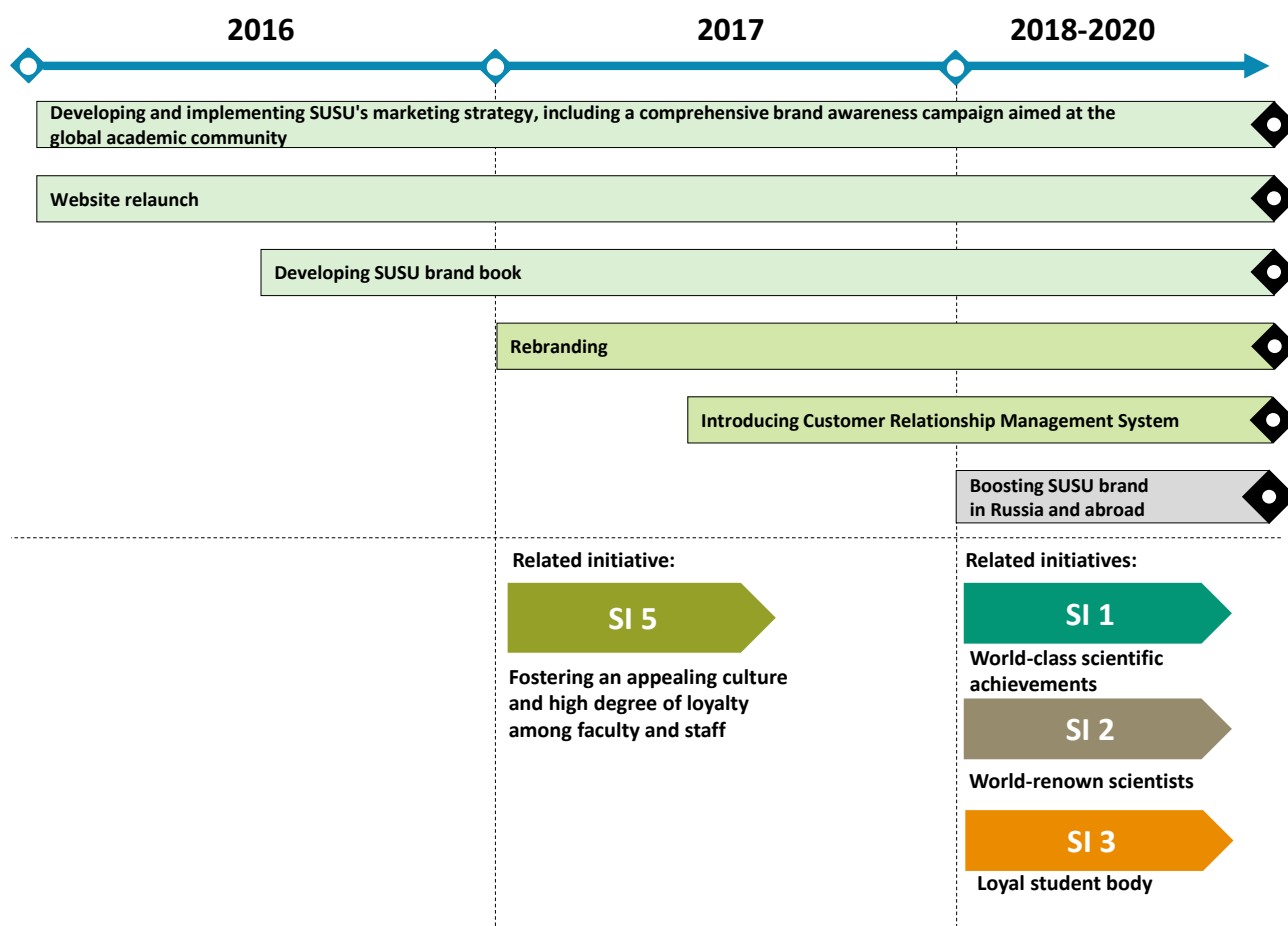

- introducing entrepreneurship development modules in educational programs;
- encouraging entrepreneurship among staff members and students;
- supporting the commercialisation of University's innovations;
- building stronger relationships with the business community as well as local and regional authorities.

**As a result of SI6 implementation, SUSU will become a central component in the region's innovation-driven economy and Chelyabinsk will take its place among global intellectual centers.**

## SI7 Reputation management

**SI7 aims:** To raise awareness of the University's brand and foster a positive image of SUSU among international academic community and prospective students.

**Picture 30. Main actions for implementing SI7**

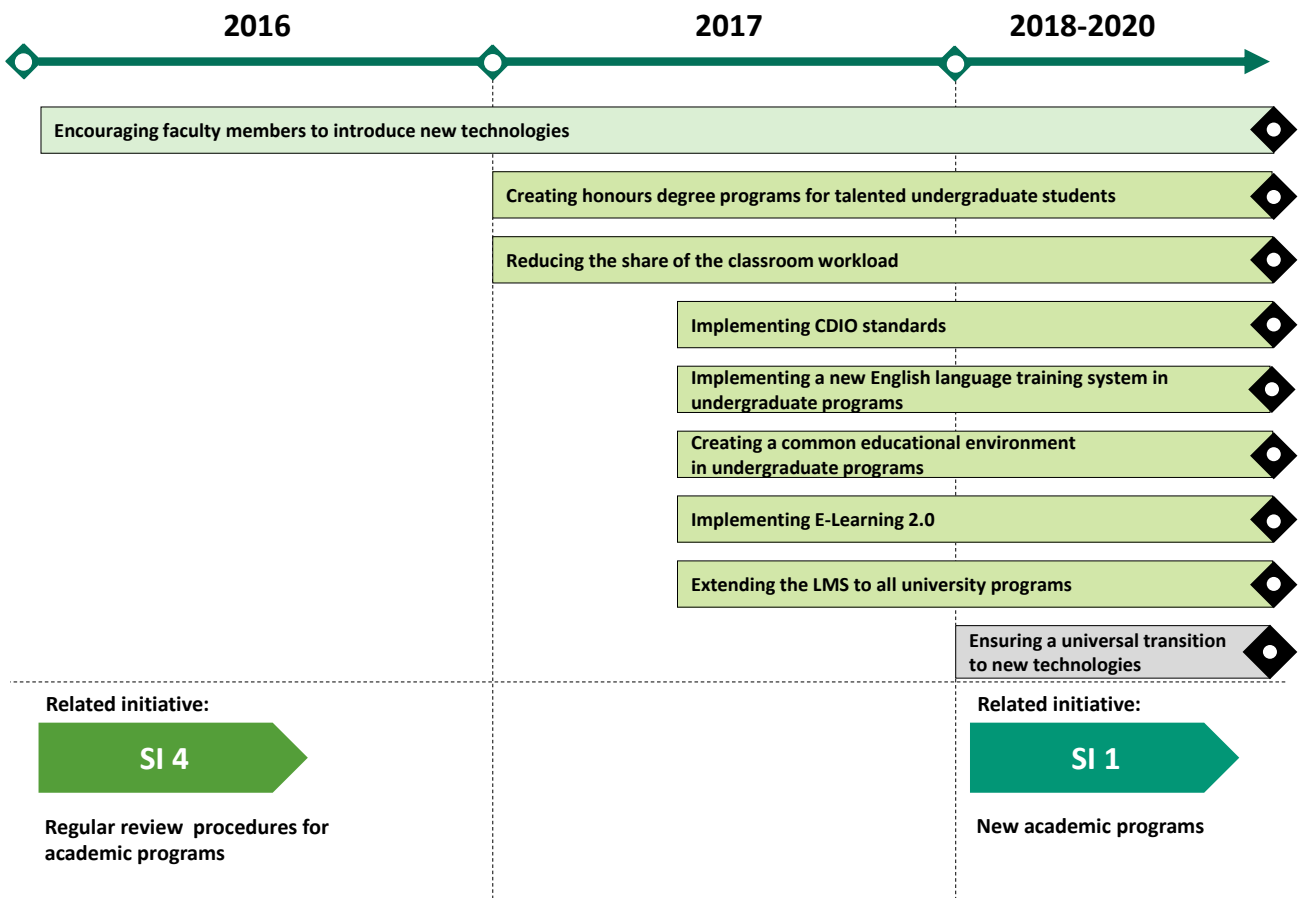

As part of SI7 implementation, in late 2015 SUSU launched a new version of its website and developed a communications strategy for 2016. The next steps include building a social media space to promote the University in social networks, implementing a CRM system to ensure effective interaction with the University's key stakeholders, preparing a brand book, and initiating a re-branding campaign.

**As a result of SI7 implementation, SUSU will ensure its competitiveness on the global market for research activities and educational services.**

## SI8 New technologies in education

**SI8 aim:** To improve the quality of education and enhance the educational process at SUSU.

**Picture 31. Main actions for implementing SI8**

To achieve this goal, SUSU will focus on mastering new educational technologies and advanced teaching methods. The SI8 priority action is to implement a system that will encourage faculty members to introduce new technologies and teaching methods in the educational process. It is expected that a pilot project will be launched in 2017 to introduce honors programs for talented undergraduate students. In 2016-2017, SUSU will continue to implement information technologies, including extending the LMS to all academic programs.

**As a result of SI8 implementation, SUSU will narrow the gap** in the quality of teaching against the world's leading universities and ensure a high level of student engagement and motivation.

## II. Implementation Plan for the Competitiveness Improvement Program

### 1. Plan Indicators

| No | Indicator  | UOM                           | 2016 | 2017 | 2018 | 2019 | 2020 | Number of Action |
|----|--|-------------------------------|------|------|------|------|------|------------------|
| 1  | Total number of employees recruited for senior management positions with a track record of working for leading universities and scientific organizations in and outside of Russia                      | Number of people (cumulative) |      | 1    | 2    | 3    | 4    | A 5.1.2          |
| 2  | Number of scientific journals of the University, included in database Web of Science and/or Scopus   | Units                         | 1    | 2    | 3    | 3    | 3    | A 7.2.1          |
| 3  | Number of employees included in the succession pool for managerial positions   | People                        | 100  | 150  | 200  | 200  | 200  | A 5.1.3          |
| 4  | Share of young faculty staff with experience in leading Russian and foreign universities and/or in the leading Russian and foreign scientific organizations in the total number of young faculty staff | %                             | 0,25 | 0,8  | 1,5  | 2,2  | 3    | A 2.2.2          |
| 5  | Share of the number of University faculty staff, participating in academic mobility programs, in the total number of University faculty staff  | %                             | 1    | 2    | 2    | 4    | 5    | A 3.2.3          |
| 6  | Number of academic mobility programs for faculty staff of University and outside organizations realized by the University  | Units                         | 5    | 10   | 15   | 20   | 25   | A 1.2.2          |
| 7  | Share of young University faculty staff in the total number of University faculty staff  | %                             | 10   | 12   | 15   | 20   | 25   | A 2.2.1          |

| <b>№</b> | <b>Indicator</b>   | <b>UOM</b>   | <b>2016</b> | <b>2017</b> | <b>2018</b> | <b>2019</b> | <b>2020</b> | <b>Number of Action</b> |
|----------|--|--------------|-------------|-------------|-------------|-------------|-------------|-------------------------|
| 8        | Share of students on educational programs of higher full-time education that received support in the total number of students on educational programs of higher full-time education  | <b>%</b>     | <i>10</i>   | <i>12</i>   | <i>14</i>   | <i>16</i>   | <i>20</i>   | A 3.2.2                 |
| 9        | Share of intern-researchers and young faculty staff, received support, in the total number of researchers and young faculty staff  | <b>%</b>     | <i>25</i>   | <i>30</i>   | <i>35</i>   | <i>40</i>   | <i>45</i>   | A 3.2.1                 |
| 10       | Number of educational programs of higher education and vocational programs developed and implemented in partnership with the leading Russian and foreign universities and/or in the leading Russian and foreign scientific organizations                         | <b>Units</b> |             | <i>2</i>    | <i>4</i>    | <i>7</i>    | <i>10</i>   | A 1.1.1                 |

## Appendix 2. Methodology for calculating additional indicators

### Methodology for calculating additional indicator 1 (AI<sub>1</sub>).

The additional indicator – “Share of master's degree and postgraduate students in total” (AI<sub>1</sub>) – is calculated as follows:

$$AI_1 = \frac{Q1 + Q2 + Q3}{Q4} * 100\%$$

where

*Q1* – Full-time master degree students as of 31 December of the reporting year;

*Q2* – Full-time postgraduate students as of 31 December of the reporting year;

*Q3* – Full-time tertiary specialists as of 31 December of the reporting year;

*Q4* – Full-time students as of 31 December of the reporting year.

Calculation of the “Share of master's degree and postgraduate students in total” indicator includes specialists under the QS rating methodology (source: <http://www.iu.qs.com/university-rankings/definitions/#toggle-id-5>).

The additional indicator – “**Number of educational programs implemented in partnership with leading international universities and research organisations**” (AI<sub>2</sub>) – is calculated using the following method:

The number of educational programs implemented in partnership with leading international universities and research organisations and additional professional programs developed and implemented starting from 2016 using a network format in partnership with leading Russian and foreign universities and/or leading Russian and foreign research organisations and/or with the involvement of the world's leading scientists in a given field of science as of the reporting date, in delivering in-class instruction; each program is factored in only once.

The additional indicator – “**Webometrics rating cumulative gain**” (AI<sub>3</sub>) – is calculated using the following method:

The Webometrics ranking methodology is available on the official website: <http://www.webometrics.info/en/Methodology>.

The ranking of universities evaluates how a university operates on the basis of its website analysis, and is calculated using the following four indicators: Presence Rank (Web-space size, 1/6 of the overall indicator); Openness Rank (Publication activity, 1/6 of the overall indicator); Excellence Rank (Scimago version of the publication activity, 1/6 of the overall indicator); and Impact Rank (Number of external links to SUSU web-space sites, 1/2 of the overall indicator). The highest university ranking available in two Webometrics rankings during the reporting year will be selected as the reporting indicator.
